

Air Charter Brokerage

Master Training and Self-Study Manual

Document reference ARC-MST-TRN-2026-007

Internal training and certification curriculum. Confidential. All amounts in USD.

Document control

Item	Detail
Owner	Director, Archē Executive
Applies to	All brokers, charter consultants and operations staff, in every office and every market
Effective	October 2026
Version	3.8, 19 October 2026: live negotiation lab and AI practice partner (14.4, 14.5), post-trip debrief (14.6), following every trip to the last leg with follow-up and client rating (11.5, A.4, B.10), ACA Essentials sponsorship (14.3) and Appendix J regional quick-reference cards. 3.7, 18 October 2026: Appendix H Portal guide (flow diagram, every feature with troubleshooting and tips) and Appendix I Portal FAQ. 3.6, 18 October 2026: client requests and operational extras, the operational rules behind them, the booking timeline, the portal, and prospect and lead rules
Review	At least once a year, and at once after a change in law, an audit finding or a serious error
Controlled copy	The current version is the copy in the Archē document folder. Printed or downloaded copies are for reference only.
Questions	Raise with the director. Nobody may change a rule in this manual on their own.
Links	Every link in Appendices D and G is checked at each review; broken or outdated links are replaced

Contents

How to use this manual
Module 0 Aviation for brokers
Module 1 Archē Executive and the broker's role
Module 2 Where we may and may not sell: the legal map
Module 3 Compliance: KYC, sanctions, fraud, bribery and data protection
Module 4 Our clients
Module 5 Enquiry intake and qualification
Module 6 Flight feasibility and trip planning
Module 7 Aircraft knowledge: long-range and heavy jets
Module 8 Sourcing on Avinode and operator vetting
Module 9 Pricing and quoting
Module 10 Contract, payment and settlement
Module 11 Trip operations, disruption and the 24/7 desk
Module 12 Selling and the consultant desk
Module 13 Case studies
Module 14 Assessment, certification and external training
Appendix A Checklists
Appendix B Templates
Appendix C Answer key
Appendix D Self-study library
Appendix E Glossary
Appendix F สรุปกฎสำคัญ (Thai summary of the critical rules)
Appendix G Watchlist (maintained by the director)
Appendix H Portal guide
Appendix I Portal FAQ
Appendix J Regional quick-reference cards

How to use this manual

This manual is the single standard for every Archē Executive broker and charter consultant. It is written for people who have never worked in aviation. Start at Module 0 even if some of it seems simple: brokers who skip the basics make the expensive mistakes.

Two training paths

Path	Modules	You may start
Charter consultant	0, 1, 2, 3, 4, 5, 12 and the case studies in 13 for reading; Appendix B call scripts	Calling clients alone after the consultant exam and 2 weeks of supervised calls
Broker	All modules 0 to 14	Quoting and contracting alone after full certification (below)

Stages and exit criteria

Stage	What you do	To pass
1. Self-study	Read the modules for your path; answer every module check	All module checks done; questions you got wrong reviewed with your mentor
2. Written exam	Final exam from the question bank, set by the director	80% or more; every critical-rule question correct
3. Systems	Avinode and Paynode training (Module 14)	Avinode and Paynode access live; one practice quote and one practice payment request completed
4. Shadowing	Follow a senior broker on live trips from enquiry to closed file, including the follow-up after the flight; visit one FBO or handler and one operator; two live negotiation lab sessions with a senior broker (Module 14.4); practise with the AI practice partner (Module 14.5)	8 complete trips shadowed; both visits done; two lab sessions recorded
5. Practical exam	Run a mock trip from enquiry to signed confirmation, with a role-played client and operator, and a scored live negotiation lab with the director (Module 14.4)	No critical error; no more than 3 minor errors; lab score 70 or more with no rule broken
6. Supervised	Run your own bookings; the director or a senior broker checks every quote and contract before it is sent; a post-trip debrief after every booking (Module 14.6)	10 bookings with no critical error; 10 debriefs signed by trainee, mentor and operations
7. Certified	Work alone on the booking ramp (Module 1)	Director signs the training record

> **Critical errors (any one stops certification and is reviewed by the director)**
>
> 1. Contract issued without KYC or sanctions screening.
> 2. Operator used without a checked AOC, insurance and safety standard (or director approval).
> 3. Flight sold that we may not sell (Module 2.4), including any cabotage breach, or quoted without a trip risk screen (Module 2.9).
> 4. Wrong price: margin below 7% without approval, a number we cannot source, or a hidden fee.
> 5. Missing client disclosures (Module 2.2).
> 6. Payment taken outside Paynode, or bank details sent by email or chat.
> 7. Personal data sent outside Avinode, the CRM or the operator.

Training records and refresher training

The director keeps a training record for each person: modules completed, exam scores, trips shadowed, practical exam result, supervised bookings and sign-off date. Records are kept for as long as the person

works for Archē and for the period our record-keeping rule sets after they leave. Everyone repeats the written exam once a year, and attends a refresher when a rule in this manual changes.

How long it takes

These are planning estimates for a full-time trainee with no aviation background. They depend on how many enquiries come in during shadowing and supervision, and are reviewed after the first trainees.

Stage	Broker	Consultant
Self-study and written exam	2 to 3 weeks	1 to 2 weeks
Avinode and Paynode training and practice	2 to 3 days	1 day
Shadowing	2 to 3 weeks	1 week
Practical exam	1 day	1 day
Supervised work	4 to 8 weeks	2 weeks
Total to work alone	about 10 to 14 weeks	about 4 to 6 weeks
Independent on complex long-range and multi-country trips	about 6 months	

> **Three rules that apply to every module**
>
> 1. Never state a number, time or rule you cannot show a source for. If you do not know, say you will confirm, and confirm in writing.
> 2. Nothing is promised to a client until the operator has confirmed it in writing.
> 3. When in doubt, stop and escalate to the director. A lost booking costs less than a wrong one.

Module 0 Aviation for brokers

This module explains, in plain words, everything a broker needs before talking to a client or an operator. Each term is also in the glossary (Appendix E).

0.1 Who does what

Party	Role in a charter
Client (charterer)	The person or company who hires the whole aircraft and pays for the trip.
Broker (Archē)	Finds the aircraft, checks the operator, prices, contracts and looks after the client. We do not fly or own aircraft.
Operator	The airline company that flies the aircraft and is responsible for safety. It holds an Air Operator Certificate (AOC) from its national aviation authority.
Aircraft owner	Often a private person or company that places its aircraft with an operator, which flies it commercially.
Crew	Captain and first officer (the pilots) and, on larger jets, one or more cabin attendants. They work for the operator.
Handler and FBO	At each airport, a handler arranges fuel, parking, catering and paperwork. An FBO (fixed-base operator) is the private terminal where passengers check in, often run by the handler.
Trip support	A company or the operator's own team that obtains permits, slots and flight plans.
Aviation authority	Each country's regulator (for example the FAA in the US, EASA and national authorities in Europe, the UK CAA, the GCAA in the UAE, CAAS in Singapore). It licenses operators and approves foreign flights.
Avinode	The online marketplace where operators list aircraft and brokers request and compare quotes. Archē books every trip through it.
Paynode	Avinode's payment service. Clients pay and operators are paid through it.

0.2 Aircraft categories

Private jets are grouped by cabin size and range. Avinode shows each aircraft's category, seats and range; always use the figures for the actual aircraft, not a general rule.

Category	In plain words	Typical use
Turboprop	Propeller aircraft with jet engines driving the propellers; slower, can use short runways	Short regional trips, small airports
Very light and light jet	Small cabin, usually no standing room	Short trips with few passengers
Midsize and super-midsize jet	Standing or near-standing cabin, more seats and range	Medium trips, often across a region
Heavy or large-cabin jet	Tall, long cabin, a lavatory and galley, often a cabin attendant and sleeping options	Long trips, larger groups, comfort
Ultra-long-range jet	Large-cabin jets built to cross oceans and continents without a stop; crew rest area	Intercontinental trips (our focus)
VIP airliner	Converted airliners such as the Boeing Business Jet and Airbus Corporate Jet	Large groups, heads of state, sports teams

0.3 Airports and their codes

Every airport has two codes. Airlines and clients use the three-letter IATA code; operators, pilots and Avinode often use the four-letter ICAO code. Use both in quotes to avoid errors, and always check: many cities have several airports, and business aviation often uses a different airport from the airlines.

City	Airport	IATA	ICAO
London	Luton	LTN	EGGW
New York	Teterboro	TEB	KTEB
Dubai	Dubai International	DXB	OMDB
Bangkok	Suvarnabhumi	BKK	VTBS
Singapore	Changi	SIN	WSSS
Geneva	Geneva	GVA	LSGG

0.4 Time

- Aviation works in UTC (also called Zulu or Z), the same time everywhere. Clients think in local time.
- Every quote and trip brief shows local times and states it clearly. Check arrival dates on long flights: crossing time zones or the date line can change the arrival date.
- When a client says "tomorrow morning", confirm the date, the time and the time zone in writing.

0.5 Flight time, block time and positioning

- Flight time runs from take-off to landing. Block time runs from when the aircraft moves off its parking stand to when it stops at the destination. Operators may price on either; their quote says which.
- A positioning leg (also called a ferry or empty leg) is a flight without passengers to bring the aircraft to the client, or back to its base. The client usually pays for it.
- An empty leg is a positioning flight the operator sells cheaply. It can be cancelled or moved if the main trip changes.
- A one-way trip can cost almost as much as a return if the aircraft must fly back empty.

0.6 Permits, slots and border control

- Permits: most countries require permission for a foreign commercial flight to land or fly over them.
- Slots: busy airports allocate take-off and landing times. A permit may not be issued until a slot is confirmed.
- PPR (prior permission required): some airports require advance approval for parking or for the flight.
- Border control: passengers pass customs, immigration and health checks. Authorities may require passenger details in advance.
- Lead times vary by country and by airport, and change. The operator and its trip support know the current rules; we ask them every time.

0.7 Crew duty and why trips sometimes need an extra crew

Pilots and cabin crew may only work a limited number of hours in a duty period, set by their authority. A long flight, an early start after a late arrival, or several legs in one day can exceed those limits. The operator then adds a second crew, flies a fresh crew in, or plans a night stop. This changes the price and the schedule, so we ask early.

0.8 Weather, air traffic and delays

Fog, storms, snow, strong winds and air-traffic restrictions can delay or divert a flight. Decisions about safety belong to the captain and the operator alone. Our job is to keep the client informed and to arrange what they need on the ground.

0.9 Safety culture

Every person at Archē is expected to speak up about anything unsafe or illegal, and to report their own mistakes at once. Honest reports are never punished; hiding a mistake is. The director keeps a log of errors and near misses and reviews it with the team so everyone learns.

0.10 The market in numbers

Figures change every year. Use these only with their source and date, and never as a promise to a client.

Figure	Source
Global business jet flights in 2025: up 5% on 2024, the busiest year on record	WINGX, full-year 2025 (January 2026)
Share of global business jet flights in 2025: North America about 72%, Latin America about 6%, Asia about 3%, Middle East about 2%, Africa about 1%	WINGX, full-year 2025
Growth in 2025: Africa about 15%, Latin America 11%, Middle East 7%, Asia 4%, Europe about 1%	WINGX, full-year 2025
North American charter (Part 135) flights in December 2025: up 1.6% on December 2024; fractional up 8.4%	ARGUS TRAQPak, December 2025
People worth USD 30 million or more (UHNWIs): 713,626 in 2026, up from 551,435 in 2021	Knight Frank, The Wealth Report 2026
US charter demand seen on Avinode: up 27% over the past year	Avinode, reported by AIN, October 2026

What it means for us: most flights happen in North America, but the fastest growth is in Africa, Latin America, the Middle East and Asia, where many of our clients live. Wealth keeps growing, and clients compare charter with other ways to fly (0.11).

ARGUS and WINGX activity reports for the end of 2025 (GlobalAir)
Knight Frank: The Wealth Report 2026

0.11 Ways to fly privately

Clients often compare charter with other products they own or have been offered. Know them so you can speak about them fairly.

Product	How it works	When a client chooses it
On-demand charter	The client hires a whole aircraft for one trip at a price quoted for that trip	Flexible trips, no commitment; what Archē sells
Empty leg	A positioning flight sold at a lower price; it can be cancelled or moved if the main trip changes	Flexible clients who accept the risk; Archē sells these too (Module 9.5)
Jet card	The client pays in advance for hours or a fund with one provider, at agreed rates and service terms	Regular flyers who want fixed rates and guaranteed availability
Membership	An annual fee for access to a provider's fleet or prices	Frequent flyers loyal to one provider
Fractional ownership	The client buys a share of an aircraft and a set number of hours a year	Very frequent flyers who want ownership without running an aircraft
Whole ownership	The client owns the aircraft, usually managed by an operator	The heaviest users

Never criticise another product. Compare on what matters to the client: flexibility, total trip cost, aircraft choice and how often they fly.

0.12 The freedoms of the air

International agreements describe what an airline of one country may do in another country's airspace. They explain why some legs are allowed and others are not.

Freedom	What it allows
1st	Fly over another country without landing
2nd	Land in another country for a technical reason, such as fuel, without picking up or setting down passengers
3rd	Carry passengers from your own country to another country
4th	Carry passengers from another country back to your own country
5th	Carry passengers between two foreign countries on a flight that starts or ends in your own country
6th	Carry passengers between two foreign countries via your own country
7th	Carry passengers between two foreign countries without touching your own country
8th	Carry passengers between two points inside a foreign country on a flight that starts or ends in your own country (cabotage)
9th	Carry passengers inside a foreign country on a stand-alone domestic flight (cabotage)

The 8th and 9th freedoms are cabotage, which most countries refuse to foreign operators (Module 2.4). Which freedoms an operator may use depends on agreements between countries and on the permits for each flight, so the operator always confirms.

ICAO: Freedoms of the Air

Check your understanding: Module 0

0.1 A client asks for a flight "from New York tomorrow at 9". What must you confirm?

a) Only the aircraft size
b) Which New York airport, the date, and the time zone
c) Only the price
d) Nothing, it is clear

0.2 Who decides whether it is safe to take off in bad weather?

a) The client
b) The broker
c) The captain and the operator
d) The FBO

0.3 Why might a one-way trip cost almost as much as a return?

a) Tax rules
b) The aircraft may have to fly back empty
c) Crew bonuses
d) It never does

0.4 Which code is the ICAO code for London Luton?

a) LTN
b) EGGW
c) LON
d) LUT

0.5 A Swiss operator wants to carry passengers from Bangkok to Phuket only. Which freedom of the air would that be?

a) 3rd freedom
b) 5th freedom
c) 9th freedom (cabotage)
d) 1st freedom

0.6 A client already owns a jet card with another company. What do you do?

a) Tell him jet cards are a bad deal
b) Compare fairly on flexibility, total trip cost and aircraft choice
c) Refuse to quote
d) Ask for his card number

Module 1 Archē Executive and the broker's role

1.1 Who we are

Archē Executive is a charter brokerage registered in Singapore. We sell private flights to clients worldwide, in every region, from our base in Asia. We do not own or operate aircraft. Our value is finding the right aircraft and operator, pricing fairly, contracting safely and looking after the client from the first call to the last invoice.

Our name, Archē, is said ar-KAY. It comes from the Greek word archē, meaning origin or first principle: the point where every trip begins. Always say ar-KAY on the phone and in meetings.

1.2 What we sell

- Whole-aircraft charters for one client, on third-party aircraft of every size, with a focus on long-range and heavy jets.
- Empty legs, on the conditions in Module 9.
- Nothing on the "never sell" list in Module 2.4.
- We do not sell flight hours on aircraft owned by Navoryx Executive or its aircraft companies while the charter sales agreement for those aircraft is in force. Pass any such request to the director.

1.3 How we earn

Our margin is 7% of the price the client pays (Module 9). The operator receives the rest through Paynode. Only our margin flows into Archē's own bank account.

1.4 Roles

Role	Does
Charter consultant	Builds the client base by phone and follow-up, captures and qualifies enquiries, hands live trips to a broker
Broker	Sources, vets, prices, contracts and runs trips; mentors consultants
Operations desk	Runs trips on the day and out of hours (Module 11)
Director	Approves exceptions, compliance decisions and disputes; owns this manual

1.5 The booking ramp

Targets are counted in booking units. One unit is USD 45,000 billed to the client; a USD 90,000 trip counts as two units. Every broker follows the ramp from their own start date: 4 units a month in months 1 to 3 (supervised bookings count), 6 in months 4 to 6 and 8 from month 7. Brokers who stay behind the ramp lose their bonus first; the director reviews by month 6 at the latest.

1.6 Three ways a broker can work

Model	What it means	Main duties
Agent of the client	The broker acts for the client and contracts with the operator on the client's behalf	Written agency agreement; disclose any relationship with the operator
Agent of the operator	The broker sells for one or more operators, usually for a commission	Use the operator's charter contract; cannot act for the client at the same time
Principal (in the US an "indirect air carrier")	The broker buys the flight from the operator and resells it to the client in its own name	Takes on responsibility to the client; client terms at least as strict as the operator's terms

Archē's legal position is being settled with counsel (Module 2.3). Until then, never describe our role in your own words: use the wording in the approved Archē charter confirmation.

NBAA Best Practices for Air Charter Brokering (2024)

1.7 Professional standards

- Never sell a flight before an operator has confirmed the aircraft, schedule and price in writing.
- Tell the director about any personal or commercial relationship with an operator, handler or supplier.
- Advertise honestly (Module 2.11).
- Keep learning: repeat the written exam once a year and attend every refresher.
- Help the people you train: senior brokers mentor new staff and model the standard.

1.8 The Archē portal: one place for everything

Every enquiry, quote, document, booking, payment record and commission for Archē lives in the Archē broker portal. Nothing is quoted, sold or paid outside it, and work done outside it earns no commission. The portal opens on your dashboard: your progress this month, your place in the team and every outstanding task, most urgent first.

Leads and prospects

- The portal assigns organisations to brokers automatically and fairly: by country and region fit, follow-up record, conversions and fair share. Every active broker receives new leads every week.
- Make first contact with every new lead within 48 hours and follow up at least every 14 days. Log every contact in the portal. A lead with no contact in time moves to the next broker with its full history. After three brokers it goes to the director.
- "Not now" leads are offered again after 90 days, to a different broker with a fresh approach.
- Add at least 10 new organisations a month, each with the public source where you found it. The first broker to add an organisation works it first. Duplicates are caught automatically.
- Adding and updating prospects earns points on the monthly leaderboard and a bigger share of new leads. No separate fee is paid: commission rewards the booking.
- Prospects are organisations and their business contacts only: no private individuals, no bought lists, no scraping, and an opt-out in every message. Anyone who opts out is "Do not contact" for everyone, for good.

These are the current settings. The director can change them in the portal; its Portal rules page always shows the ones in force.

Booking rights and separate duties

- Operations checks each trip, confirms the operator price on Avinode, completes KYC and sanctions screening, creates the Paynode payment request and issues the confirmation.
- The director can give a broker booking rights, so the broker also works as operations. Nobody confirms, prices or records payment on their own booking: another operations member or the director does it.

Check your understanding: Module 1

1.1 A client asks to charter an aircraft owned by Navoryx Executive. What do you do?

a) Quote it at 7%
b) Pass the request to the director
c) Ask the operator for a discount
d) Decline without comment

1.2 A trip billed at USD 135,000 counts as how many booking units?

a) 1
b) 2
c) 3
d) 4

1.3 A client wants to buy four seats on someone else's flight. Which is right?

a) We sell the seats
b) We sell whole-aircraft charters to one client only
c) We split the price four ways
d) We ask the operator to sell them

1.4 A broker buys the flight from the operator and resells it in its own name. Which model is that?

a) Agent of the client
b) Agent of the operator
c) Principal
d) None

1.5 You have not contacted a new lead within 48 hours. What happens?

a) Nothing
b) It moves to another broker with its history at the next assignment round
c) It is deleted
d) You lose commission on all trips

1.6 A broker with booking rights sells a trip. Who issues its confirmation?

a) The same broker
b) Another operations member or the director
c) The client
d) The operator

Module 2 Where we may and may not sell: the legal map

Archē sells worldwide, so we meet many sets of rules. This module gives the principles that apply everywhere, the list of flights we never sell, and a map by region. The law changes: the operator, its trip support and the official sources in Appendix D confirm what applies to each flight. When anything is unclear, the director decides before a quote is sent.

2.1 The broker's boundary

A broker arranges a flight; the operator performs it. Never describe Archē as the airline, never put our name forward as the carrier, and never let a client believe we fly or own the aircraft.

2.2 What every client is told, worldwide

We apply the strictest common standard to every client. Before the contract is signed, the client receives in writing:

1. That Archē Executive acts as a charter broker and not as the operator.
2. The operator's full legal name as shown on its AOC, and any trading name it uses.
3. The aircraft type, registration and year of manufacture, or "type or similar" until the tail is fixed.
4. The total price, what it includes, and every item that may be charged after the flight and how (Module 9).
5. The passenger insurance the operator carries, as confirmed by the operator, and whether Archē itself holds liability insurance.

2.3 Our contract position

All bookings run through Avinode, and all client and operator payments run through Paynode, so that only Archē's margin enters Archē's own account. The legal wording of our role towards the client is being settled with counsel and will be reflected in the Archē charter confirmation. Until then, use only the approved confirmation (Part A Key Booking Terms and Part B Standard Conditions), never your own wording, and never agree to change liability, cancellation or payment terms.

2.4 Flights we never sell

Never sell	Why	What to do
A flight by an operator without a commercial AOC, or on an aircraft not listed on its AOC	Illegal charter: uninsured and unsafe	Reject; report to the director
A domestic leg (two airports in the same country) on an aircraft from a foreign operator, unless the operator confirms in writing that the country allows it	Cabotage: most countries reserve domestic flights for their own carriers	Use a local operator for the domestic leg, or redesign the trip
United States domestic flights (both airports in the US) on any non-US operator	US law allows only US-citizen carriers to fly passengers within the US	Never quote
Any United States domestic flight, even on a US operator, until US counsel has confirmed Archē's position	Archē policy while our US position is confirmed	Pass to the director
Flights between two EU countries, or inside one, on a non-EU operator, unless the operator confirms the permission	EU traffic is reserved for EU carriers; exceptions need specific permission	Use an EU operator
Individual seats sold to different people on one flight	Selling seats needs public-charter or airline authority; we sell whole aircraft to one client	Never sell per seat
Flights into, out of or over the EU for a client who is a Russian national (including dual nationals) or a company controlled by one, or on Russian-registered aircraft	EU sanctions deny landing, take-off and overflight to such aircraft, including private and chartered aircraft	Stop; report to the director
Flights for sanctioned persons or companies, or to destinations under embargo without director clearance	Sanctions law (Module 3)	Stop; report to the director
Operators on the EU Air Safety List (banned or restricted operators)	Safety and EU law	Never use
Medical flights with patients needing care on board	Air ambulance needs specific approvals and equipment	Refer to an air-ambulance operator through the director
Flights with accommodation or other travel sold as one package	Package-travel and travel-licence rules (for example ATOL in the UK)	Only with director approval
Any flight where the client asks to hide passenger names from the operator or the authorities	Illegal and a sanctions and security risk	Refuse; report to the director

2.5 The map by region

Region	What applies to Archē	What applies to the flight
United States	US rules for air charter brokers (14 CFR Part 295, in force since 14 February 2019) apply to anyone acting as an air charter broker: state clearly that we are a broker; name the operator; disclose our liability insurance or that we have none; give the full price with a good-faith estimate of known extra fees; never misrepresent aircraft, ratings, flight time or safety.	Only US-citizen carriers may fly passengers between US points. Foreign operators need US authority for international charters.
Canada and Latin America	Consumer law of the client's country.	Domestic flights are generally reserved for local carriers; foreign operators need permits for each flight. Confirm with the operator.
European Union, EEA and Switzerland	No broker licence; EU consumer and package-travel rules for consumer sales; EU sanctions (Module 3).	Non-EU operators need an EASA third-country operator (TCO) authorisation and each state's permits; the whole aircraft must be chartered; tickets may not be sold to the public. Traffic inside the EU is reserved for EU carriers.
United Kingdom	The CAA treats flights for payment without an AOC as illegal (the Air Charter Association publishes guidance). Package sales to UK consumers can fall under ATOL.	Foreign operators need UK permission; UK domestic legs are reserved for UK carriers unless permitted.
Middle East and Africa	No specific broker licence in most states.	Landing and overflight permits through the operator's handler; requirements, sponsor rules and lead times differ by state.
Singapore (our home)	Singapore company, tax and data-protection law apply to Archē (Module 3).	Foreign operators need a CAAS Foreign Operator Operations Permit, an Air Transport Permit through flightSG for each non-scheduled flight, and a slot: Changi slot requests at least 72 hours before the flight; Seletar through its booking window.
Thailand (our Asian hub)	Thai data-protection law for data handled in Thailand.	Overflight and landing permits from the Civil Aviation Authority of Thailand; slots and parking approval first at the main Bangkok airports and Phuket; full schedule, passenger and crew details and a specific purpose; cabotage closely enforced.
Rest of Asia-Pacific (for example China, India, Japan, Australia)	Consumer and data law of the client's country.	Domestic flights are generally reserved for local carriers; permits and lead times vary widely. Confirm with the operator.

2.6 Cabotage examples

Trip	On a foreign-registered aircraft
London – Paris – London	International legs; normally fine with permits and, for a non-EU operator, the EU and UK permissions
Teterboro – Miami – Nassau	Teterboro – Miami is a US domestic leg: never on a non-US operator. Use a US operator for the whole trip, subject to the US policy in 2.4
Dubai – Mumbai – Delhi – Dubai	Mumbai – Delhi is an Indian domestic leg: only if the operator confirms in writing that it is permitted
Bangkok – Phuket – Singapore with the same passengers	Bangkok – Phuket is domestic: only as one continuous international journey declared on the permit, and only if the operator confirms

2.7 Spotting illegal charter

- Get the operator's AOC and the operations specifications that list the aircraft, and check the aircraft is on them.
- Get the insurance certificate and check it covers commercial passenger flights.

- Watch for: privately registered aircraft offered for payment, "cost-sharing", dry leases sold as charter, prices far below the market, refusal to send documents.
- Reject any aircraft offered without a commercial AOC and report it to the director the same day.

2.8 Other rules that follow the trip

Beyond the never-sell list, these rules apply in many countries. None of them is a reason to refuse a trip by itself; each is a reason to check before quoting.

Area	What to spot	Typical trigger	Action
Conflict zones and closed airspace	Routes over or near conflict areas; EASA publishes Conflict Zone Information Bulletins and the FAA issues security notices and prohibitions for US operators; insurers may exclude war-risk areas	A route crossing a region in the news; Appendix G	Operator confirms routing and insurance in writing; director approves
Sanctions and embargoes	Countries under broad sanctions, sector sanctions, and US export rules for US-made aircraft	Destination, nationality, aircraft make; Appendix G	Stop; director decides
Hidden domestic legs	Islands and territories that belong to another country, so a leg between them is domestic	Two stops that look like two places but are one country; Appendix G	Cabotage check with the operator
Taxes that follow the trip	US federal excise tax on charters touching the US; EU VAT; UK Air Passenger Duty (a higher rate for aircraft of 20 tonnes or more with fewer than 19 seats, which covers most large private jets); Singapore GST. A broker acting as principal can have to collect US excise tax	Any US, EU or UK leg	Operator states taxes in its quote; the director confirms our role with the accountant
Packages and consumer rules	EU package-travel rules and UK ATOL when a flight is sold with a hotel or other travel	Client asks for hotel or event tickets	Director approval
Politically exposed persons (PEPs)	Heads of state, ministers, senior officials, senior managers of state companies, and their families and close associates	Title, government email, state-owned payer	Enhanced KYC; director approval
Bribery laws that reach abroad	The US Foreign Corrupt Practices Act and the UK Bribery Act can apply outside those countries	Officials or handlers asking for cash to "speed up"	Refuse; report (Module 3.6)
Children and vulnerable passengers	A child travelling without both parents may need a consent letter; unusual passenger patterns can signal trafficking	Children with one adult or with no relative	Ask for consent documents; escalate any doubt
Animals	Rabies-free countries have strict import routes and approved arrival airports	Any pet; Appendix G	Check the authority's rules before quoting
Weapons, cash and valuables	Firearms, large cash sums and precious metals need permits or declarations	Hunting trips, security teams, cash	Operator and authorities decide; director informed
Airport restrictions	Night curfews, slot-controlled airports, military airfields, temporary restrictions during major events	Late arrivals, big events	Operator confirms
Strict permit regimes	Some countries have long lead times and strict rules for foreign operators	Appendix G	Ask the operator for lead time before quoting

2.9 The trip risk screen

Every enquiry passes this screen before sourcing, and the result is recorded on the intake form. Each answer gives a colour: green means proceed; amber means the operator or its trip support must confirm in writing before we quote; red means stop and escalate to the director. The screen is only as good as the watchlist behind it (Appendix G), so always check the current watchlist, never your memory.

Question	Check	Amber	Red
1. Who flies and pays?	Nationalities, PEPs, sanctions, minors, third-party payer, payer's country	PEP; child with one adult; payer differs	Sanctions match; Russian national with an EU point; refuses KYC; payer or operator in a country Paynode cannot serve (Appendix G.7)
2. Where?	Country of every airport (including territories), domestic legs, conflict zones, embargoes, taxes	Domestic leg; conflict-zone routing; strict permit country	US domestic leg; embargoed destination
3. What aircraft and operator?	AOC, banned lists, safety rating, where the aircraft was built	No rating; US-made aircraft to a sanctioned country	No AOC; banned operator
4. What is carried?	Pets, weapons, cash, medical equipment, dangerous goods	Any of these	Patient needing care in flight
5. How is it sold?	Whole aircraft to one client; hotel or package; seat sharing	Hotel or event added	Individual seats
6. When?	Curfews, slots, major events, permit lead times, crew duty	Short notice into a strict permit country	Lead time impossible to meet

2.10 Passenger liability: the Montreal Convention

For international flights between countries that have joined it, the Montreal Convention of 1999 sets what the air carrier (the operator) owes passengers for death or injury, delay and baggage. The limits are in Special Drawing Rights (SDR), a currency unit of the International Monetary Fund, and are reviewed every five years.

Claim	Limit from 28 December 2024
Death or injury of a passenger	151,880 SDR per passenger without proof of fault; above that unless the carrier proves it was not at fault
Delay	6,303 SDR per passenger
Baggage	1,519 SDR per passenger, unless a higher value was declared

- Claims about the flight lie against the operator, not Archē.
- Clients carrying valuable items should declare them to the operator or insure them.
- If a client raises EU passenger-rights rules (Regulation 261/2004) or any other passenger-rights claim, pass it to the director.

Revised Montreal Convention limits, 2024 (CAAT notice)

2.11 Advertising and marketing

- Never write "our fleet", "our jets" or "our aircraft". A disclaimer does not cure it. We arrange flights on aircraft operated by certified operators.
- In the United States, an advertised price must be the full price the customer pays (14 CFR 399.84).
- Claim a safety rating only for the operator and date we have checked.
- Use client names, photos or testimonials only with written consent.
- Social media, websites and brochures are approved by the director before publication.

US full-price advertising rule, 14 CFR 399.84

Check your understanding: Module 2

2.1 A client asks for Miami to San Juan, Puerto Rico, on a Canadian operator's jet. What is the issue?

a) None, it is international
b) Puerto Rico is US territory, so this is a US domestic leg
c) Only a visa issue
d) Only a tax issue

2.2 Your trip risk screen shows one amber and no red answers. What happens next?

a) Quote at once
b) The operator or its trip support confirms the amber point in writing before we quote
c) The director must refuse
d) Ignore it

2.3 A client wants Teterboro – Miami – Nassau on a European operator's jet. What is right?

a) Fine, it ends abroad
b) The Teterboro – Miami leg cannot be flown by a non-US operator
c) Only Nassau needs a permit
d) Ask the client to sign a waiver

2.4 A client with Russian nationality wants to fly Dubai – Nice on a chartered jet. What do you do?

a) Quote normally
b) Stop and report to the director
c) Use a non-Russian aircraft
d) Fly to Geneva instead without telling anyone

2.5 Which item is NOT part of the written disclosure to every client?

a) Operator's legal name on the AOC
b) That we are a broker
c) The operator's purchase price for the aircraft
d) Total price and possible extra charges

2.6 A non-EU operator flying into Europe needs which EASA approval?

a) Part-NCC
b) TCO authorisation
c) ATOL
d) Part 295

2.7 A passenger's bag is lost on a charter from Paris to Dubai. Who is the claim against?

a) Archē
b) The operator, under the Montreal Convention
c) The FBO
d) Nobody

2.8 Which advertising line is acceptable?

a) "Fly on our fleet of Global jets"
b) "Archē Executive arranges flights on aircraft run by certified operators"
c) "Our jets, your schedule"
d) "Our aircraft are ARGUS Platinum"

Module 3 Compliance: KYC, sanctions, fraud, bribery and data protection

Private aviation moves wealthy people and large sums across borders. Banks, Paynode and regulators expect us to know who we deal with. Every booking passes this module before a quote becomes a contract.

3.1 Know your client (KYC)

Client type	What we collect	Check
Private individual	Full name, date of birth, nationality, passport copy, residential address, contact details	Name matches passport; address plausible
Company	Registered name and number, country, registered address, directors, ultimate beneficial owners (25% or more, or control), authorised signatory and their ID	Company exists on its official register; signatory authorised
Agent, assistant or family office booking for a principal	Agent's identity and authority; principal's identity as above	Who pays and who flies are known
Payer different from client	Payer identity and the reason	Director approval before acceptance

Record the KYC reference on the Archē charter confirmation. Repeat clients: refresh KYC at least once a year or when details change.

3.2 Sanctions screening, step by step

1. List every name to screen: client, payer, ultimate beneficial owners, every passenger, the operator and the aircraft owner if known.
2. Search each name on the official lists in Appendix D: United Nations consolidated list; Singapore (Monetary Authority of Singapore); United States (OFAC sanctions list search); European Union consolidated list; United Kingdom (UK Sanctions List, the single UK list since 28 January 2026).
3. Search with full name and date of birth; also try common alternative spellings.
4. Check nationality and the route against Module 2.4 (for example the EU rules on Russian nationals and aircraft) and against countries under embargo.
5. Record the result in the sanctions screening record (Appendix B), with date, lists searched and outcome.
6. Screen again if any name, passenger or the route changes.

> **A possible match**
>
> Stop. Do not tell the client why. Do not take payment. Report to the director the same day, with the screening record. Only the director decides whether to proceed.

3.3 Export controls

Many business jets are made in the US or contain US parts. Flights with such aircraft to some countries need US export authorisation or are prohibited, whoever owns the aircraft. Any flight to a country under sanctions or embargo goes to the director before any quote; the operator confirms its own authorisation in writing.

3.4 Money-laundering warning signs

- Payment from a third party or a country unrelated to the client
- Pressure to accept cash, crypto-assets or split payments
- Overpayment followed by a refund request to a different account

- Urgency together with reluctance to give identity documents
- Routings or passenger lists that make no business or personal sense
- Requests to keep passenger names from the operator

Any of these: pause and escalate. Never accept cash.

3.5 Payment fraud

- Clients pay only through a Paynode payment request issued from Avinode. We never send bank details by email or messaging apps.
- If anyone, including an operator, asks to pay into or change to a new bank account, confirm it by telephone on a number you already hold, never one in the request.
- Every Archē confirmation carries the bank-detail fraud warning. Never remove it.

3.6 Gifts and bribery

Never offer, give or accept anything of value to win or keep business improperly. Bribery is a crime in Singapore and in most countries where our clients and operators are. Gifts and hospitality beyond small courtesies, from or to clients, operators, handlers or officials, need the director's approval and are recorded. Never pay anyone to speed up a permit or a border check.

3.7 Data protection

Passport copies, passenger lists and travel plans are personal data. Singapore's Personal Data Protection Act applies to Archē; local laws such as Thailand's Personal Data Protection Act, the EU and UK General Data Protection Regulation and US state laws can apply to clients and staff in those places. We follow the strictest common standard:

- Collect only what the flight and the law need, and tell the client why.
- Store client and passenger data only in Avinode and the Archē CRM. No personal phones, private email or messaging groups.
- Share passenger data only with the operator and its handlers for the flight.
- Delete or anonymise data when it is no longer needed under our retention rule.
- Report any loss or wrong sending of data to the director at once.
- Outbound calls and messages: respect national do-not-call rules (for example Singapore's Do Not Call Registry) and every opt-out (Module 12).

Check your understanding: Module 3

3.1 A new client asks to pay through his cousin's company in another country. What do you do?

a) Accept
b) Get the payer's identity and reason, and the director's approval
c) Ask for cash instead
d) Send our bank details by email

3.2 A passenger's name is a close match on the OFAC list. First step?

a) Tell the client
b) Stop, take no payment, report to the director with the record
c) Ask the operator
d) Change the spelling

3.3 A handler offers to "speed up" a permit for a cash payment. You:

a) Pay it
b) Refuse and report to the director
c) Add it to the price
d) Ask the client to pay it

3.4 Where may passport copies be stored?

a) WhatsApp group
b) Avinode and the Archē CRM
c) Personal email
d) Any cloud drive

Module 4 Our clients

4.1 Who they are

Our clients are mainly very wealthy individuals and their families, company leaders, and the assistants and family offices who book for them. They expect discretion, accuracy and speed, and they notice small mistakes.

4.2 Working with assistants and family offices

- Confirm in writing who may book, who may change a booking and who pays.
- Send confirmations to the agreed people only.
- Never contact the principal directly unless the assistant agrees.

4.3 Discretion

- Never mention a client's name, trip or habits to anyone outside the booking, including other clients and operators on other trips.
- Never post or share photographs, names or flight details on social media.
- Use the client's preferred name and form of address.

4.4 Working across cultures

Our clients come from every region. Good practice that works everywhere: be formal until invited otherwise; confirm names and titles; respect religious holidays, prayer times and dietary rules when planning schedules and catering; ask rather than assume; keep the same standard of courtesy for clients, assistants, crew and handlers.

4.5 Saying no

Sometimes the answer is no: the law, safety or our rules do not allow a request. Say so early, plainly and politely, give the reason in general terms, and offer an alternative where one exists ("That leg must be flown by a local operator; I can arrange that for you"). Never invent a reason and never blame the operator.

Check your understanding: Module 4

4.1 An assistant asks you to send the final itinerary also to the principal's private email, which you found online. You:

a) Send it
b) Send only to the people agreed in writing
c) Post it to the client's social media
d) Ask the operator

4.2 How do you refuse a domestic leg the law does not allow?

a) Blame the operator
b) Explain early and offer a legal alternative
c) Ignore the request
d) Book it anyway

Module 5 Enquiry intake and qualification

5.1 The booking life cycle

Stage	What happens	Output
1. Enquiry	Capture the mission (5.2) on the intake form	Enquiry in CRM
2. Qualification	Confirm the client is real, able to pay and serious; KYC started	Qualified or closed
3. Legal check	Check the trip against Module 2.4	Allowed, redesigned or refused
4. Feasibility	Airports, permits, cabotage, crew duty, documents (Module 6)	Route feasible
5. Sourcing	Request quotes on Avinode; vet operators (Module 8)	Shortlist
6. Quote	Price at 7%; send through Avinode (Module 9)	Quote with expiry
7. Contract and payment	KYC and sanctions done; confirmation signed; Paynode payment (Module 10)	Confirmed booking
8. Operations	Passenger details, permits, catering, ground transport, monitoring (Module 11)	Flight operated
9. Close	Extras reconciled with receipts; feedback; file closed (Module 11)	Booking closed

5.2 What to capture

Use the intake form in Appendix B. It covers: lead passenger, booker and payer; dates, local times and flexibility; airports (city and preferred airport, with codes); passengers including children and infants; nationalities; luggage and special items; pets; purpose where a permit needs it; catering, ground transport and special requests; budget and payment method; and how the client heard of us.

5.3 Qualification

Ask early, politely and directly: who will fly, who will pay, and when the decision will be made. We do not hold aircraft or run long searches for enquiries that are not qualified. A qualified client has a real trip, a decision-maker we can reach, and no obstacle to KYC.

5.4 Mission types

Mission	What is different	Watch for
Executive and family trips	One client, one to a few legs, privacy matters most	Exact local times, documents, catering preferences
Groups: sports teams, music tours, roadshows	Many legs in a few days, fixed event times, large baggage or equipment	Crew duty limits, slots, baggage weight and volume, back-up aircraft
Corporate shuttles	Repeated flights on a schedule for one company	A framework contract approved by the director; changes and cancellations
Evacuation and repatriation	Urgent flights out of a crisis area	Director approval, security, war-risk insurance, permits, sanctions
Medical flights	Patients needing care on board	Not a normal charter: refer through the director

5.5 Client requests and operational needs

Capture two separate lists at intake. They are handled and charged differently, and both can change the aircraft, the airport, the schedule or the price.

List	What belongs in it	Examples
Client requests	What the client asks for	Special or dietary catering; a car or helicopter transfer; flowers or a celebration; child seats; pets; sports equipment or oversized luggage; a language on board; help for a passenger with reduced mobility
Operational needs	What the trip needs in order to operate, often charged to the client	Extra ground handling; de-icing; opening an airport outside its hours; crew hotel and allowances; aircraft parking or hangarage; a private terminal and customs; permits and slots; a technical stop or extra crew; Wi-Fi use

Ask about both on the first call. Confirm every item with the operator or the supplier in writing, with how it is charged (Module 9.8). Medical care on board is never a request: it is a medical flight (Module 5.4).

Check your understanding: Module 5

5.1 At which stage do you check the trip against the "never sell" list?

a) After payment
b) Before sourcing
c) After the flight
d) Never

5.2 When does a booking become confirmed?

a) When the client says yes
b) When KYC and sanctions are done, the confirmation is signed and payment is received as agreed
c) When the operator quotes
d) At take-off

5.3 A music tour needs six cities in five days with heavy equipment. What do you check first with the operator?

a) Paint colour
b) Crew duty limits, slots and baggage weight and volume
c) Only the price
d) Nothing

5.4 A client asks for halal catering and a car at arrival. Where do they go?

a) Operational needs
b) Client requests, each confirmed with its supplier and how it is charged
c) Nowhere: the crew handles it
d) Only in the trip notes

Module 6 Flight feasibility and trip planning

The operator is responsible for the safe and legal conduct of the flight. Our job is to ask the right questions early. Every answer comes from the operator or its trip support in writing.

6.1 What can stop or change a trip

Topic	What can stop or change a trip	How we handle it
Range and fuel stops	Range on paper falls with more passengers and luggage, headwinds and long runways at hot or high airports	Operator confirms in writing whether the trip is non-stop or needs a fuel stop, for that load and season
Runway and airport	Long-range jets need longer runways when heavy; some airports have limited hours, fire cover or parking	Operator confirms the airport suits the aircraft and the time
Crew duty	Long or multi-leg days can exceed crew limits	Operator confirms the crew plan; extra crew or night-stop costs are in the quote
Permits and slots	Approvals and lead times differ by country and airport	Operator or trip support obtains them; we give complete details early; never promise an approval
Cabotage	Domestic legs on foreign aircraft (Module 2)	Operator confirms in writing before quoting
Passenger documents	Passports, visas, health entry rules; advance passenger information	Each passenger is responsible for their own documents; we say so in writing; the handler confirms requirements using official sources such as IATA Timatic
Pets	Entry rules differ by country; some require permits and approved arrival airports	Check the destination authority's rules and the operator's acceptance before quoting
Dangerous goods	Spare lithium batteries, weapons, ammunition, oxygen and some medicines are restricted	Ask the client; the operator decides
Medical needs	Passengers needing care in flight	Not a normal charter: refer through the director
Catering, ground and security	Special catering, cars, helicopters, security teams	Ordered through the operator or confirmed suppliers; cost confirmed in writing before it is included

6.2 Choosing the airport

- Many cities have a business-aviation airport closer to the destination than the airline hub; ask where the client is actually going.
- Opening hours and night curfews.

- Customs and immigration: international flights must use an airport where they are available, sometimes only on request.
- Rescue and firefighting cover: each airport has a fire category, and larger aircraft need a higher one. The operator confirms the airport suits the aircraft.
- Runway length for the aircraft and its load, especially at hot or high airports.
- Slots, parking and an FBO or handler.

6.3 Long flights over water or remote areas

Twin-engine aircraft flying far from diversion airports, for example across oceans, can need specific approval (known as ETOPS or EDTO). It can lengthen the route or require a stop. The operator plans it and confirms the routing in writing.

6.4 Weather basics for brokers

- Pilots use a METAR (the current weather at an airport) and a TAF (the forecast). The crew and operator decide; we only watch for what may affect the client.
- Fog and low cloud can delay or divert flights, often in the early morning.
- Snow and ice mean de-icing, charged at cost after the flight.
- Thunderstorms, strong winds and tropical storm seasons can delay or reroute flights.
- From 48 hours before departure, check the forecast and warn the client early if delays are likely.

Aviation Weather Center (METAR and TAF)

6.5 Operational requirements and the rules behind them

The operator and the captain decide how each of these is handled. The rules below explain why they exist, so you ask the right questions early and tell the client what may be charged.

Requirement	The rule behind it	When it applies	What we do
De-icing and anti-icing	No take-off with frost, ice or snow on the wings, control surfaces, engines or sensors: EU CAT.OP.MPA.250 and US 14 CFR 135.227. Ground procedures follow ICAO Doc 9640 and SAE AS6285.	Cold, wet weather: northern winter (about November to March), southern winter (about June to September), and high or cold airports at any time	List it as an operational need, charged at cost after the flight with the receipt. Allow extra time; never promise a departure time in icing conditions.
Airport hours and night restrictions	Each airport publishes its hours and restrictions in its country's aeronautical information publication (AIP) and in NOTAMs. Many have night curfews or noise rules.	Late-night and early-morning departures or arrivals	Ask the operator whether the airport is open at that time. An out-of-hours opening may be possible at extra cost, or not at all: then change the time or the airport.
Slots and prior permission (PPR)	Busy airports are slot-coordinated (in the EU under Regulation (EEC) No 95/93, elsewhere under national rules and the worldwide airport slot guidelines). Business aviation needs a slot there too. Some airports require prior permission for the flight or for parking.	Major hubs, big events and peak seasons	The operator or its trip support requests slots and PPR as soon as the trip is booked. Never promise a time before the slot is confirmed.
Customs, immigration and private terminals	An international flight must land first at an airport with customs and immigration (Chicago Convention, Article 10). Authorities require passenger information in advance, for example eAPIS for the United States.	Every international arrival and departure	Check that customs is available at the planned time. A private terminal (FBO or VIP terminal) can cost extra. Passenger details reach the operator by its deadline.
Crew duty and rest	Limits come from the operator's authority. Example: on US unscheduled Part 135 flights a two-pilot crew may fly up to 10 hours in 24 hours, within a duty period of up to 14 hours, with at least 10 hours of rest (14 CFR 135.267). In Europe, EU flight-time rules (ORO.FTL) apply to commercial operations, and national rules still apply to some business-jet air-taxi work.	Long sectors, several legs in a day, an early start after a late arrival	Ask the operator for the crew plan in writing: extra crew, a fresh crew or a night stop. The cost is in the quote or listed as an operational need.
Crew hotel and allowances	Crew take their rest away from the aircraft.	The aircraft waits with the client overnight or for several days	Agree with the operator whether hotel and allowances are in the price or charged at cost.
Parking and hangarage	Airports limit parking space, and some require prior permission to park. A hangar protects the aircraft from snow and ice.	Night stops and waiting days, especially at busy or winter airports	Confirm parking, or repositioning to another airport, before booking. A hangar in winter can avoid de-icing but costs extra.
Technical stops and long sectors	Range falls with load, headwinds and hot or high airports. Long flights over water can need ETOPS or EDTO approval (Module 6.3).	Very long sectors and full cabins	Only the operator confirms non-stop for that load and season. A technical stop adds time, fees and sometimes permits.
Permits	Non-scheduled flights need permission to land in, and often to fly over, other countries (Chicago Convention, Article 5, and national rules). Domestic legs on foreign aircraft are cabotage (Module 2).	Every international trip; strictest in the countries in Appendix G.5	Give the operator the full routing and passenger details at booking. Later changes need new permits and may be refused.
Pets	Entry rules for animals differ by country (in the EU, Regulation (EU) No 576/2013). Some countries accept pets only on approved routes and at approved airports.	Any animal on board	Check the destination's rules and the operator's written acceptance before quoting. See Appendix G.4.
Dangerous goods and weapons	Governed by ICAO Annex 18 and the ICAO Technical Instructions. Spare lithium batteries, oxygen, some medicines, firearms and ammunition are restricted.	Any unusual item in the luggage	Ask the client; the operator decides. Firearms and armed security need permits in every country involved: refer to the director.
Children and passengers needing help	Infants count as passengers on the manifest. Child seats must be acceptable to the operator. A passenger who needs medical care in flight needs an air ambulance.	Families, elderly passengers, reduced mobility	List child seats and assistance as client requests. Medical care on board is never a normal charter: refer through the director.
Catering and allergies	The caterer and the operator are responsible for food safety; they need allergies in writing.	Every flight: always ask about allergies	Write dietary needs and allergies on the order and get them confirmed back.

Anything that depends on the day (de-icing, extra parking, out-of-hours fees, crew nights after a change) is charged at cost after the flight, with receipts. Anything a supplier quotes in writing before booking can be a fixed price. Module 9.8 explains how each is priced.

In the Archē portal the trip file suggests operational needs from the trip itself: de-icing for winter dates at airports north of 35° N (November to March) or south of 35° S (June to September); out-of-hours handling for departures between 22:00 and 06:00; crew hotel and parking when the aircraft waits between legs; a private terminal and customs on international arrivals; a possible technical stop on sectors over 6,500 km; and client requests from words in the trip notes. A suggestion is a prompt to ask the operator, never a fact.

Check your understanding: Module 6

6.1 Avinode shows a range that covers the route. Can you promise non-stop?

a) Yes
b) Only after the operator confirms for that load and season
c) Only in winter
d) Only for heavy jets

6.2 Who decides whether a passenger may carry a spare lithium battery?

a) The broker
b) The client
c) The operator
d) The FBO

6.3 A client needs a nurse and stretcher on board. What do you do?

a) Book a normal jet
b) Refer to an air-ambulance operator through the director
c) Ask the client to bring equipment
d) Decline

6.4 A TAF at the destination forecasts fog at arrival time. Who decides whether to fly?

a) The broker
b) The client
c) The crew and operator
d) The FBO

6.5 A client flies Geneva to London in January at 07:00 and snow is forecast. How is de-icing handled?

a) Included free
b) Listed as an operational need, charged at cost after the flight with the receipt
c) Fixed at USD 2,000 in the quote
d) Jets never need it

6.6 A client wants to leave at 01:00 from an airport that closes at 23:00. What do you do?

a) Promise the time
b) Ask the operator whether an out-of-hours opening is possible and at what cost; otherwise change the time or the airport
c) Ignore it
d) Tell the client to call the airport

6.7 Who sets a crew's duty and rest limits?

a) The broker
b) The client
c) The operator's authority, applied by the operator
d) The FBO

Module 7 Aircraft knowledge: long-range and heavy jets

7.1 Families to know

Clients choose by cabin, comfort and whether the jet can fly the trip without a stop. Learn the main families below from the manufacturers' own pages (Appendix D) and from each aircraft's listing on Avinode. Never quote a range, speed or seat number from memory: always use the specific aircraft's data and the operator's confirmation.

Manufacturer	Long-range and large-cabin families to know
Bombardier (Canada)	Global Express, Global XRS, Global 5000, 5500, 6000, 6500, 7500 and 8000; Challenger 650 (large cabin, shorter range)
Gulfstream (United States)	G450, G550, G500, G600, G650 and G650ER, G700, G800
Dassault (France)	Falcon 900 series, 7X, 8X, 6X
Embraer (Brazil)	Lineage 1000 (converted airliner); Praetor 600 (super-midsize, long range for its class)
Boeing and Airbus	Boeing Business Jet and Airbus Corporate Jet: VIP-converted airliners

7.2 How to compare aircraft for a client

Point	What to look at
Cabin	Height (can people stand), width, length, number of zones
Seats and beds	Number of seats, how many can be made into beds on a night flight
Range for this trip	Operator's confirmation for the actual load, not the brochure figure
Age and refurbishment	Year of manufacture and date of last cabin refurbishment
Connectivity	Type of Wi-Fi and whether it works on the route; any usage charge
Crew	Number of cabin attendants; crew rest area on long flights
Baggage	Hold size and whether it is reachable in flight; skis, golf bags
Lavatory and galley	Number of lavatories; galley for hot meals

Check your understanding: Module 7

7.1 A client asks the range of a Global 6000. Where do you get the answer?

a) Memory
b) The aircraft's Avinode listing, the manufacturer's page and the operator's confirmation for the trip
c) A competitor's website
d) The client

7.2 For a 13-hour night flight, which points matter most?

a) Paint colour
b) Beds, crew rest and confirmed non-stop range for the load
c) Aircraft name
d) Number of windows

Module 8 Sourcing on Avinode and operator vetting

8.1 Sourcing on Avinode

1. Search the route and dates; filter by category, seats, year of manufacture and the features the client needs.
2. Send requests for quotes to several suitable operators at once, with the full trip details (RFQ text in Appendix B).
3. Compare quotes on the same basis: all-in price, inclusions and exclusions, positioning, aircraft age and cabin, operator safety credentials, quote expiry.
4. Choose; confirm availability and the final price with the operator in writing.
5. Quote the client from Avinode (Module 9); book and pay the operator through Avinode and Paynode (Module 10).

Direct contact with operators is good for relationships and off-market aircraft, but every booking is recorded and paid through Avinode and Paynode.

8.2 Operator vetting standard

Check	Standard	Evidence on file
AOC	Valid commercial AOC; aircraft listed in the operations specifications	AOC and operations specifications
Insurance	Current certificate covering commercial passenger flights	Insurance certificate
Safety audit	ARGUS Gold Plus, Platinum or Platinum Elite, or Wyvern Wingman; ARGUS Gold only with director approval	Rating shown on Avinode or the audit provider's site, with date
Safety management standard	IS-BAO registration is a strong plus	Certificate
Banned lists	Operator not on the EU Air Safety List or any similar national ban	Search result with date
Foreign permissions	The authorisations needed for the route (for example EASA TCO, US authority, CAAS operations permit)	Operator's written confirmation
History	No fatal accident, serious incident or regulatory sanction in the last 36 months without a satisfactory explanation	Public accident databases and operator statement
Sanctions	Operator and owner not sanctioned (Module 3)	Screening record
Terms	Operator terms can be matched back to back by our client terms	Operator contract

8.3 When the operator has no audit rating

Many good operators worldwide have no ARGUS or Wyvern rating. They may be used with the director's approval if all of these are in place:

- AOC and aircraft confirmed with the issuing authority or its public register where one exists
- Insurance confirmed by the insurer or the operator's insurance broker, not only by a copy

- IS-BAO registration, or a completed Archē operator questionnaire on safety management, crew training and maintenance
- No adverse history in public accident databases
- Two references from brokers or clients who have flown with the operator

8.4 Red flags

- Price far below every other quote for the same trip
- Aircraft registered privately, or not on the AOC
- Reluctance to send AOC, insurance or contract
- Payment requested to a personal account or a country unrelated to the operator
- Last-minute change of operator or aircraft without explanation

8.5 Crew and insurance

- Ask the operator to confirm that the crew are type-rated and current on the aircraft; on long-range trips, ask about their experience on the type and route.
- Insurance must cover commercial passenger flights. In the United States, liability cover of USD 50 to 100 million is typical for turbojets (NBAA, 2024); ask what the operator carries and record it.
- Where possible, ask the operator to add the client, and Archē, as additional insured on its policy.
- Check the regulator's public records for enforcement action against the operator where they exist.

Check your understanding: Module 8

8.1 Which audit standard is accepted without director approval?

a) ARGUS Gold
b) ARGUS Gold Plus
c) No rating
d) Any rating

8.2 An operator is not rated. Which is required?

a) Nothing
b) Director approval plus AOC, insurance, history and references checked
c) Client approval only
d) A lower price

8.3 Before using an operator for a flight into Europe, which list do you check?

a) The OFAC list only
b) The EU Air Safety List
c) The ATOL list
d) None

8.4 What should you ask the operator about its insurance?

a) Nothing
b) What liability cover it carries, and whether the client and Archē can be added as additional insured
c) Only the premium
d) Who the insurer's director is

Module 9 Pricing and quoting

9.1 How we get the price

Every price comes from a written operator quote. We do not estimate operator costs and never quote an item we cannot show a source for.

1. Request an all-in quote through Avinode with the full trip details.
2. Ask the operator for its inclusions and exclusions in writing: positioning legs, crew overnight costs, landing, handling and parking, navigation fees, standard catering, fuel and any fuel surcharge, taxes, de-icing, Wi-Fi use, permits.
3. Note the quote currency and its expiry.
4. For items outside the operator quote that the client wants (special catering, ground transport, security), get a written quote from the supplier before including it.

9.2 Costs that cannot be fixed before the flight

Some costs depend on the day: de-icing, extra parking or hangar time, extra crew nights after a schedule change, late catering, Wi-Fi data use, changing airport or passenger taxes, and permit fees for late changes. Treat them the same way every time:

- Never put a number on them unless the operator or supplier has given it in writing.
- List them in the quote and in Part A of the confirmation as "at cost, invoiced after the flight with receipts".
- If the client asks how much, ask the operator for its best estimate in writing and pass it on as the operator's estimate, never as a fixed price.
- After the flight, recharge only what the operator invoices, with receipts, with no margin unless the confirmation says otherwise.

9.3 The Archē price formula

Our margin is 7% of the price the client pays. Because it is a share of the selling price, divide the cost by 0.93; do not add 7% to the cost.

> **Price formula**
>
> Archē cost = operator all-in price (including positioning legs) + supplier items Archē buys for the client, confirmed in writing
>
> Client price = Archē cost ÷ 0.93 Archē margin = client price − Archē cost = 7% of the client price
>
> Not included: items "at cost, after the flight" (9.2), and card payment costs, charged as set out in the confirmation

9.4 Worked examples

Example	USD
A. One-way: operator all-in 100,000	Client price 100,000 ÷ 0.93 = 107,527; margin 7,527
Wrong method: 100,000 + 7% = 107,000	Margin 7,000 = only 6.5% of the price
B. Multi-leg: three legs quoted by one operator, all-in 180,000 including positioning	Price on the total: 193,549; margin 13,549. Never price legs separately if the operator quotes the trip as one
C. Shared positioning: operator lowers its price from 100,000 to 92,000 because the empty return is sold	New client price 98,925 if the client is not yet contracted; if already contracted, the confirmation decides who benefits
D. Supplier item: ground transport quoted 1,200 in writing; operator all-in 60,000	Archē cost 61,200; client price 65,807; margin 4,607
E. Currency: operator quotes in EUR, client pays in USD	Convert the operator price with the Paynode rate on the day of the quote; state the quote currency and that it is fixed only after payment
F. Post-flight: de-icing invoiced by the operator at 2,850 with receipt	Recharge 2,850 through Paynode within 7 days of the flight, with the receipt; no margin

Margins below 7% need the director's approval before the quote is sent. Round client prices up, never down.

9.5 Empty legs

Empty legs are priced with the same formula on the operator's empty-leg conditions, which usually allow the operator to cancel or change the flight if the main charter changes. The client receives those conditions in writing; the Archē confirmation prints them when the booking type is "empty leg".

9.6 Presenting the quote

- Send the quote from Avinode, using the quote email template in Appendix B: aircraft type and year, seats, operator, schedule in local time, price, inclusions, "at cost" items and the expiry.
- Say "tail to be confirmed" if the aircraft is not yet fixed, and confirm it before the contract.
- Never show the operator's price or our margin to the client.
- Quotes expire with the operator quote; re-confirm price and availability before sending the contract.

9.7 Negotiating with operators

- Ask for an all-in price and compare like for like (Module 8.1).
- Use the client's flexibility: a different day, time or airport can save positioning or match an empty leg.
- Ask how the operator prices waiting days, one-way versus return and shared positioning.
- Never invent a competing quote, misstate the client's needs or press for savings on safety, crew or maintenance.
- Good operators remember fair brokers: agree terms in writing and pay on time.

9.8 Pricing client requests and operational extras

Every client request and operational extra is charged in one of three ways. Agree which with the operator or the supplier in writing before the confirmation is issued.

How it is charged	When to use it	Price and payment
Included in the charter price	The operator includes it in its all-in quote, for example standard catering or handling	Nothing extra: it is part of the operator price
Fixed price	A supplier or the operator quotes it in writing before booking, for example a car, flowers or a private terminal fee	Like any supplier item Archē buys, it carries the 7% margin: supplier price ÷ 0.93, rounded up. It is its own line on the confirmation and is paid with the balance, or with the full price when departure is less than 7 days away
At cost after the flight	The amount depends on the day: de-icing, extra parking or hangarage, out-of-hours fees, crew nights after a change, Wi-Fi use	No number before the flight (Module 9.2). Invoiced within 7 days of the flight with the receipts, through Paynode; payable within 10 calendar days of the invoice (Part A, A7). No margin

Worked example: an operator all-in price of USD 100,000 gives a charter price of 107,527. The client adds a car at arrival, quoted in writing at 1,200: the fixed line is 1,200 ÷ 0.93 = 1,290.32, rounded up to 1,291. Total payable: 108,818. The deposit stays at 25% of the charter price: 26,882. The balance of 81,936 is due 7 days before departure. Winter de-icing is listed at cost and invoiced after the flight.

Check your understanding: Module 9

9.1 The operator all-in price is USD 60,000. What is the client price at 7%?

a) 64,200
b) 64,517
c) 63,000
d) 67,000

9.2 A client asks the de-icing cost before booking. You:

a) Guess 2,000
b) Ask the operator for a written estimate and pass it on as its estimate
c) Add it to the fixed price
d) Refuse to answer

9.3 Which items carry the 7% margin?

a) Everything including post-flight extras
b) The operator price and confirmed supplier items Archē buys
c) Only the operator price
d) Only extras

9.4 Operator all-in 140,000 plus a written catering quote of 2,500 bought by Archē. Client price?

a) 153,226
b) 152,500
c) 150,000
d) 153,000

9.5 Which negotiation step is acceptable?

a) Telling the operator you have a cheaper quote you do not have
b) Asking whether a different departure day saves positioning
c) Asking the crew to skip rest
d) Hiding the passenger count

9.6 A car at arrival is quoted in writing at USD 1,200 before booking. What does the client pay for it?

a) 1,200
b) 1,284
c) 1,291
d) 1,320

9.7 How is de-icing charged?

a) As a fixed price with margin
b) At cost after the flight with the receipt, without margin
c) Always included
d) Never

Module 10 Contract, payment and settlement

10.1 The contract

The client signs the Archē charter confirmation: booking details, Part A Key Booking Terms and Part B Standard Conditions. It is issued only when the pre-issue checklist (Appendix A) is complete.

- Back to back: our cancellation, change and payment terms to the client are never more generous than the operator's terms to us. If the operator's terms are stricter than Part A, the director decides before issue.
- Payment and cancellation follow Part A of the confirmation. Learn them; never vary them.
- No flight departs until the client has paid in full as agreed.

10.2 How money moves

Step	What happens	Where
1	Booking confirmed with the operator on Avinode	Avinode
2	Client receives a Paynode payment request from the trip and pays by bank transfer, card or instant payment	Paynode
3	Client funds are held in Archē's Paynode account	Paynode
4	Operator is paid from Paynode on its payment terms	Paynode
5	Archē's margin is transferred to Archē's operating account at Citi Singapore (account being set up)	Citi Singapore

Only our margin enters Archē's own bank account. Operator money never passes through it.

10.3 Refunds, changes and disputes

- Refunds go back the same way they came, to the same payer, through Paynode.
- Schedule changes: get the operator's new price in writing; issue an amended confirmation; collect any difference before the flight.
- Card chargebacks or disputes: escalate to the director the same day with the file.

10.4 The booking file

Every booking keeps, in Avinode and the CRM: enquiry, KYC and sanctions records, operator quotes, AOC, operations specifications, insurance and audit evidence, the signed confirmation, payment records, the passenger list and post-flight invoices.

10.5 Financial controls

- No credit: every flight is paid in full as agreed before departure.
- Check Paynode every day: payments received, payments to operators and refunds match the bookings.
- Currency: the quote states its currency; a price in another currency is fixed only once paid.
- Card payments can be disputed later: keep the signed confirmation and proof of the flight in the file.
- Keep the booking file for the period set by Archē's record-keeping rule.
- Separate duties: the person who sold a trip never issues its confirmation or records its payments; a second person does.

10.6 When to book: the booking timeline

When	What must happen	Where it is set
When quoting	The quote and the confirmation state the offer expiry date, time and time zone. Once it has passed, re-confirm the aircraft and price with the operator before signing.	Module 9.6; the confirmation
On signature	Deposit of 25% of the charter price, at least USD 2,500. If departure is less than 7 days away, the full price on signature. The booking is held only once cleared funds arrive.	Part A, A3
Within 24 hours of the deposit	Names and passport copies for everyone travelling (with the signature if paid in full). Permit authorities may set an earlier date, which must be met.	Part A, A4
As soon as booked	The operator or its trip support requests permits, slots and prior permission, and orders the confirmed requests and extras. Never promise an approval.	Modules 0.6 and 6.5
7 days before the first departure	Balance due, including fixed-price requests and extras. Positioning legs are part of the trip.	Part A, A3
48 hours before	Check the weather (de-icing, delays), the crew plan, airport hours and the trip brief.	Modules 6.4 and 11.1
Day of flight	Passengers ready at the departure terminal 45 minutes before the scheduled time.	Part A, A6
After the flight	Items at cost invoiced within 7 days with receipts; the client pays within 10 calendar days of the invoice.	Module 9.8; Part A, A7
If the client cancels	Written notice; the charge follows the scale in Part A, A9, or the operator's stricter scale shown in the remarks.	Part A, A9

Book as early as the client allows. Every day closer to departure means fewer aircraft to choose from, permits and slots that are harder to get, and payment due at once.

10.7 How to book in the Archē portal, step by step

1. Open the enquiry: from a lead with "Open an enquiry", or with New enquiry. For each airport, type a city, airport name or code and pick from the list; the portal stores the ICAO code.
2. Add the client requests and operational extras, each with how it is charged (Module 9.8). Use the suggestions as prompts and confirm every item with the operator or supplier.
3. Enter the operator quote from Avinode: operator legal name as on its AOC, aircraft type, registration, Avinode trip ID, the operator all-in price and any direct trip costs. The portal sets the client price at 7%.
4. Attach the operator quote, AOC, insurance certificate, safety audit evidence and the client's KYC documents. Documents stay in the portal: never email passports or contracts.
5. Tick the seven pre-issue checks and send the trip to operations.

6. Operations confirms the operator price on Avinode, completes KYC and sanctions screening, creates the Paynode payment request and issues the charter confirmation in the portal. The PDF is saved to the trip; any change after issue becomes a numbered revision.
7. Operations records the client's payment, the operator payment through Paynode and the flight. Your commission then appears on your dashboard.

Check your understanding: Module 10

10.1 The operator's cancellation terms are stricter than Part A. What happens?

a) Issue anyway
b) Director decides before issue
c) Change Part A yourself
d) Ask the client

10.2 Which money enters Archē's Citi account?

a) Full client payment
b) Only Archē's margin
c) Operator payment
d) Nothing

10.3 A trip departs in 5 days. What does the client pay on signature?

a) 25% of the price
b) The full price
c) USD 2,500
d) Nothing until the flight

10.4 When is the balance, including fixed-price extras, due?

a) On the day of flight
b) 7 days before the first scheduled departure
c) After the flight
d) 30 days after signature

Module 11 Trip operations, disruption and the 24/7 desk

11.1 Before the flight

- Send passenger details to the operator as early as possible and by its deadline.
- Confirm permits and slots are approved (operator or trip-support confirmation).
- Confirm catering, ground transport and special requests in writing.
- Confirm every client request and operational extra with the operator or supplier in writing, with how it is charged.
- From 48 hours before: check the forecast for de-icing and delays, the airport's hours for the planned times, and the crew plan for long or late days.
- Send the client the trip brief (Appendix B): aircraft, operator, FBO address, arrival time, document reminder and our 24-hour contact.

11.2 Day of flight

Track the flight from departure to arrival. Keep the client informed before they need to ask.

11.3 Disruption

Event	First actions
Aircraft unserviceable (AOG)	Ask the operator at once for a replacement of equal or higher category under its contract; if none, search Avinode and direct operators; extra cost needs the director's approval before it is committed; tell the client what is happening and when you will update them.
Weather or air-traffic delay	Get the new time from the operator; confirm crew duty limits still allow the flight or what the alternative is; arrange lounge or hotel through the handler if needed.
Permit refused or late	Operator and trip support lead; explain the cause; offer an alternative routing if the operator confirms one.
Passenger refused at the border	Follow the authority's decision; documents are the passenger's responsibility; inform the director.
Any safety concern	Never press an operator to fly; safety decisions belong to the crew and operator.

11.4 The 24/7 desk

- Months 1 to 8: brokers share an on-call rota set by the director; the on-call broker answers the client line and operator calls out of office hours.
- From month 9: the four-person operations desk covers 24 hours in shifts.
- Every shift ends with a written handover in the desk log (Appendix B): live trips, open issues, promised call-backs.
- Any disruption that needs extra cost or a change of operator is escalated to the director at any hour.

11.5 After the flight

A trip is not finished when the aircraft takes off. The broker who sold it follows it to the last landing and then follows up with the client. A file is closed only when every step below is done.

Follow the trip to the last leg

- Watch every leg in the portal under Flight following: departed, landed, delayed, diverted or cancelled, with the local time. The operator or its trip support gives the times; the 24/7 desk covers the hours you are off duty.
- Tell the client at once about any delay, diversion or change, with what happens next (Module 11.3).
- The trip counts as flown only when the last leg has landed and the passengers have left the aircraft. Operations then records the flight.

Follow up with the client

- Within 24 hours of the last landing, the broker calls or messages the client or the assistant personally: was everything as promised, and is anything still open. Log it in the portal (Aftercare).
- At the same time, send the client the rating request from the portal (template B.10). It asks for a score from 1 to 5 for the trip overall, the aircraft, the crew and the broker, and for any comment. The client answers with one click from the email; nothing is required.
- Record the answer in the portal when it arrives. A score of 3 or less, or any complaint, starts service recovery: the broker calls the client within 1 working day, the director is told the same day, and anything about the operator is recorded for the operator scorecard.
- Ratings feed the broker's service score and the operator scorecard in Control, so we book the operators our clients rate highest. Never publish a client's rating or words without the client's written consent, and never write, offer a reward for or edit a review.

Settle and close

- Collect the operator's final invoice and receipts for items charged at cost.

- Recharge the client within 7 days of the flight, with copies, through Paynode.
- Close the file only when all payments are settled, the follow-up is logged and the rating request has been sent.

11.6 Meeting the client at the FBO

- For first-time or very important clients, the director may ask a broker or a local representative to meet the client at the FBO.
- Arrive early; check with the handler that the crew, aircraft, catering and cars are ready.
- Greet the client, introduce the crew, and stay in the background.
- Never board the aircraft or interfere with the crew's work.

11.7 Sustainability questions

- Clients may ask about emissions, sustainable aviation fuel (SAF) or carbon offsets.
- Pass on only what the operator or a certified provider states in writing.
- Never call a flight "green" or "carbon neutral" without a certificate for that flight.

Check your understanding: Module 11

11.1 When may you close a trip file?

a) When the aircraft takes off
b) When the client has paid
c) When all payments are settled, the follow-up is logged and the rating request has been sent
d) After 30 days

11.2 A client rates the trip 2 out of 5. What happens?

a) Nothing, it is optional
b) Service recovery: the broker calls within 1 working day and the director is told the same day
c) The rating is deleted
d) The client is offered a discount on the next trip at once

11.3 How soon after the last landing does the broker follow up personally?

a) Within 24 hours
b) Within 7 days
c) Only if the client complains
d) Never; the operator does it

11.4 An AOG means the replacement costs more. Who approves the extra cost?

a) The broker
b) The director
c) The client's assistant
d) The operator

11.5 The captain says the weather makes departure unsafe. You:

a) Ask him to try anyway
b) Accept the decision and look after the client
c) Find another crew
d) Cancel without telling the client

11.6 What must every desk shift end with?

a) A phone call to the director
b) A written handover in the desk log
c) Nothing
d) An email to clients

Module 12 Selling and the consultant desk

12.1 The Archē standard

- Answer every enquiry the same business day; urgent same-day trips at once.
- Say what you will do and by when, then do it.
- Write as you speak: short, clear, no jargon, no exaggeration.
- Never criticise competitors or operators to a client.
- Confirm everything important in writing.

12.2 Inbound calls

Use the inbound call script (Appendix B): listen first, capture the mission, qualify, agree the next step and when the client will hear from you. Do not quote prices on the first call unless you have a current written operator quote for the same trip.

12.3 Common objections

Client says	Answer along these lines
"Another broker is cheaper."	Compare the same aircraft, age, operator rating and inclusions; if like for like, ask the director whether we can match.
"Why can't you fix the price for everything?"	Some costs depend on the day; we list them and charge only what the operator invoices, with receipts.
"Can we pay later?"	No flight departs until paid in full; Paynode makes paying quick and secure.
"Just add two friends on the domestic leg."	Only if the operator confirms in writing that the law allows it.
"Why do you need my passport?"	The law and the operator require it for every passenger; it is stored securely and used only for the flight.

12.4 Charter consultants (outbound)

- Call only lists approved by the director; never buy or scrape lists.
- Check numbers against the national do-not-call register where one exists (for example Singapore's Do Not Call Registry) and record every opt-out at once.
- Say who you are and why you call in the first sentence; use the outbound script (Appendix B).
- Hand every live trip to a broker for sourcing and pricing until certified as a broker.
- Log every call and outcome in the CRM.

12.5 Account management and growth

- Every enquiry moves through the CRM pipeline: new, qualified, quoted, won or lost, with the reason for a loss.
- Follow up every quote before it expires.

- For repeat clients, keep their preferences (catering, seating, cars) with their consent, and use them on the next trip.
- Ask for feedback after every trip and act on it.
- Ask satisfied clients for introductions; never pay for referrals without the director's approval.

What the director tracks	Why
Response time to new enquiries	Clients book with whoever answers well and first
Quote-to-booking conversion	Shows quality of qualification and quotes
Repeat clients	The best measure of service
Bookings without errors	The Archē standard

12.6 Negotiating with clients

- Sell value, not discounts: aircraft, operator safety, service and certainty.
- Offer two or three options at different prices rather than cutting the margin.
- Below 7% needs the director's approval (Module 9).

Check your understanding: Module 12

12.1 Before calling a number from a new list, you must:

a) Call at once
b) Check the national do-not-call register and record opt-outs
c) Send a message first
d) Ask the operator

12.2 A client says another broker is cheaper. First step?

a) Cut our margin
b) Compare like for like
c) Criticise the other broker
d) End the call

12.3 A client says the price is too high. What is the best first answer?

a) Cut the margin at once
b) Offer two or three aircraft options at different prices
c) Criticise the operator
d) End the call

Module 13 Case studies

Work each case yourself first, then compare with the model answer.

Case 1 A simple one-way in Europe

Situation. An assistant asks for 6 passengers from London to Nice next Friday morning, returning on a separate trip later.

Model answer

1. Confirm: which London airport, departure time in local time, names and nationalities, luggage, payer. Start KYC.
2. Check Module 2.4: international flight, nothing restricted. Screen all names.

3. Avinode: request quotes for midsize and super-midsize jets from operators allowed to fly in the EU and UK; ask inclusions and exclusions.
4. Compare and vet (Module 8). Choose; confirm with the operator in writing.
5. Price: operator all-in ÷ 0.93. Quote from Avinode with expiry and "at cost" items.
6. Confirmation signed; Paynode payment request; operator paid through Paynode.
7. Trip brief to the assistant; flight tracked; post-flight extras recharged with receipts.

Case 2 A US trip that touches a domestic leg

Situation. A client in Hong Kong wants New York (Teterboro) – Miami – Nassau for 8 people on a European-registered jet she flew before.

Model answer

1. Teterboro – Miami is a US domestic leg: no foreign operator may carry it (Module 2.4).
2. Archē policy: no US domestic flights until US counsel has confirmed our position. Pass to the director.
3. Explain to the client early and plainly; offer the alternative the director approves (for example a trip that starts in Miami for the international leg, or referral).
4. Never quote the European jet for the domestic leg.

Case 3 Long range, Asia to Europe

Situation. A family of 10 wants Singapore to London overnight, non-stop, with plenty of luggage.

Model answer

1. Shortlist ultra-long-range jets on Avinode; request quotes with the full passenger and luggage load.
2. Ask each operator in writing whether the flight is non-stop for that load and season, or needs a fuel stop; and how the crew will be planned (extra crew for duty limits).
3. Check slots and permits for both ends through the operator; Singapore requires a permit and slot (Module 2.5).
4. Compare beds, crew rest, Wi-Fi and age (Module 7). Present two options, each with the operator's confirmed routing.
5. Price, contract and payment as usual; trip brief states local times at both ends and the arrival date.

Case 4 An empty leg

Situation. An operator lists Geneva – Dubai empty in three days. A client wants it.

Model answer

1. Screen client and passengers; check nationality against the EU rules on Russian nationals and aircraft (Module 2.4).
2. Get the operator's empty-leg conditions in writing: it can cancel or change if the main charter changes.
3. Price with the formula on the empty-leg price; quote as "empty leg" with those conditions.
4. Confirmation prints the empty-leg conditions; the client confirms he accepts the risk; Paynode payment.

Case 5 Aircraft grounded on the day

Situation. Nice – New York booked. Three hours before departure the operator reports a technical fault (AOG).

Model answer

1. Ask the operator for a replacement aircraft of equal or higher category under its contract.
2. If none: search Avinode and direct operators at once; vet the replacement (Module 8).

3. Any extra cost: director approval before commitment.
4. Tell the client what happened, what you are doing and when you will update; keep updating.
5. Record everything in the file and the desk log; agree any refund or credit under the confirmation.

Case 6 A compliance stop

Situation. A new client company asks for Dubai – Paris. The payer is a different company in a third country; one passenger shares a name with a listed person.

Model answer

1. Payer different from client: get the payer's identity and reason; director approval needed (Module 3.1).
2. Possible sanctions match: stop; no payment; no explanation to the client; report to the director with the screening record.
3. Do not continue sourcing until the director decides.

Case 7 A winter night departure with a long stay

Situation. A family of eight wants Zurich to Bangkok on 22 January, leaving at 23:30, staying five nights, then flying home. They ask for halal catering, a car at arrival and a child seat for a two-year-old.

Model answer

1. Client requests: halal catering, a car at arrival and a child seat. Get the car as a written supplier quote (fixed price ÷ 0.93) or list it at cost; confirm the catering and the seat with the operator (Modules 5.5 and 9.8).
2. Operational needs: de-icing at Zurich in January (at cost after the flight); the airport's hours and night restrictions for 23:30 (ask the operator, change the time if needed); a private terminal and customs at Bangkok (Module 6.5).
3. The sector is about 9,000 km: ask the operator in writing whether it is non-stop for eight passengers and their luggage in January, or needs a technical stop, and how the crew is planned.
4. The aircraft waits five nights: agree crew hotel and allowances and parking at Bangkok, or positioning home and back, whichever the operator prices lower.
5. Thailand: permits and slot or parking approval at the Bangkok airport; no domestic legs on a foreign aircraft (Module 2).
6. Timeline: deposit on signature, names and passports within 24 hours, balance including fixed extras 7 days before departure; de-icing invoiced after the flight (Module 10.6).

13.7 Spot the problem

Each short trip hides one problem. Name it and the action, then check Appendix C.

S1 Los Angeles – Honolulu – Tokyo for a family of five on a Japanese-registered jet.
S2 Madrid – Tenerife – Madrid on a Swiss operator.
S3 A minister's office books Geneva – Riyadh; the ministry pays.
S4 A 14-year-old flies London – New York with an aunt.
S5 Four friends each want to pay for one seat on a Paris – Ibiza flight with other strangers.
S6 Client adds a hotel and Formula 1 tickets to the flight and wants one price.
S7 A hunting party flies Johannesburg – Windhoek with rifles.
S8 Dubai – Tehran on a Gulfstream for a business meeting.
S9 A dog travels Bangkok – London in the cabin.
S10 Arrival at a curfewed European airport planned for 01:30 local.
S11 A handler asks for USD 500 in cash to "speed up" a landing permit.

S12 Hong Kong – Shanghai – Hong Kong on a Hong Kong-registered jet.

Module 14 Assessment, certification and external training

14.1 Assessment

- Module checks after each module; review every wrong answer with your mentor.
- Written exam: questions drawn from the module checks and new scenarios; pass mark 80%, with every critical-rule question correct.
- Practical exam: a mock trip from enquiry to signed confirmation; no critical error and no more than 3 minor errors (critical errors are listed in "How to use this manual").
- Live negotiation lab: scored by the director at stage 5; 70 or more out of 100 with no critical point broken (14.4).
- Post-trip debrief: required after every supervised booking (14.6).

14.2 Avinode and Paynode training

Avinode publishes free onboarding videos and guides in its Help Center. They can be watched without logging in, so trainees can start before Archē's account is live. Complete the starter course below in order during stage 3, then take the live sessions with Avinode's onboarding team.

Step 1 Before you start

Getting Started with Avinode Marketplace Short videos for brokers: quick tools, aircraft search, trips buying, Trip Board, empty-leg search, response statistics

Paynode Member Eligibility Who can use Paynode and the company checks (KYB) that apply

Step 2 Starter broker training

Starter Broker Training video with Paynode Avinode's core broker course for Paynode members; this is the Archē set-up

Paynode training and Online Banking Walkthrough The Paynode account, payments in and out, currency accounts

Step 3 Quoting and booking

Trip Manager and Online Booking training video From request to client quote, contract and payment in one flow

Trip Manager training videos Six short videos: request and quote detail, quote PDF to client, trip sheet, invoice, default notes and documents

Creating a Professional Quote Quote layout in Trip Manager

Buying trips with the new booking flow How a broker accepts an operator's quote, signs and pays

Step 4 Taking and making payments

How to Create a Payment Request The only way a client pays Archē

Payment Guide: Overview of Sending Payments Paying the operator

Overview of card payments Card payments and what they cost the client

Match a Wire Transfer to your Trip using a Payment Request Linking a bank transfer to the right trip

Timelines and cut-off times for payments Why a late payment can delay a flight

Step 5 What Paynode cannot do

What our payments platform cannot support Countries and activities Paynode will not handle (Appendix G.7)

Supported payment methods and country restrictions SWIFT and local payment options

White paper: payment security for air charter Payment fraud and how to vet customers and transactions

Step 6 Live sessions and practice

- When Archē joins Avinode, ask the onboarding team for a live broker session for every broker and consultant, using our own account and settings.
- Ask for a separate Paynode session: payment requests, card and bank payments, currency accounts, operator payouts, refunds, user rights and fraud controls.

- Ask whether Avinode offers a practice or test environment for trainees.
- Exit check for stage 3: one practice quote and one practice payment request completed, reviewed by the director.

The Help Center has more articles under Getting Started, Scheduling and Quoting, and Charter Payments: Paynode. Settings articles (logo, notification lists, trip statuses, user permissions) are for the director, who sets up the account.

14.3 External courses

The Air Charter Association's Air Charter Essentials Certificate is a one-day introduction for new staff with limited or no aviation background: air charter roles, the commercial process, aviation geography, flight routing, time zones, airport operations and aircraft knowledge, with an assessment and a certificate for those who pass. It is open to non-members. As at October 2026 it runs in person at London Gatwick (next date 3 February 2027) and an online version is announced for January 2027. Published fees: USD 680 (GBP 495) for non-members; USD 405 (GBP 295) for staff of member companies and for people aged 18 to 25.

Archē sponsorship (proposed)

- Who: brokers and consultants who have passed the written exam (stage 2) and completed 3 supervised bookings, or earlier for a trainee the director nominates.
- What: Archē pays the course fee directly to the ACA. Book the online course when it opens (January 2027); the in-person course only when a trainee is in the UK anyway.
- Repayment: if the broker's agreement ends within 12 months of the course, the broker repays 100% within 6 months and 50% between 6 and 12 months. This must be written into the broker agreement first; confirm the wording with counsel.
- Record: the certificate goes into the training record. It is an external credential only: Archē's own rules, pricing and procedures stay in this manual and are not shared with outside courses.
- Next step: when Archē joins the ACA, high-potential brokers can add the Broker Qualification Level 1, and member rates apply to Essentials.

ACA: Air Charter Essentials Certificate Dates, fees and booking

The UK Air Charter Association runs a three-level Broker Qualification (Level 1 foundation knowledge, Level 2 operations and flight management, Level 3 advanced broker skills; Level 1 also online). It is open only to staff of member companies, so Archē must join first. Published prices per level range from about USD 610 to USD 745, with member rates lower; check the current price before booking.

ACA level	Archē modules that prepare for it
Level 1: foundation	Modules 0, 1, 2, 3, 4, 5
Level 2: operations and flight management	Modules 6, 7, 8, 11
Level 3: advanced broker skills	Modules 9, 10, 12, 13

The mapping is Archē's own guide to preparation; the ACA sets its own syllabus.

14.4 Live negotiation and objection lab

Knowing the rules is not enough: UHNW clients and their assistants test a broker's calm and judgement under pressure. The lab practises this out loud. A senior broker or the director plays the client, the assistant or the operator; the trainee does not see the script. Each session takes about 30 minutes and covers two or three scenarios.

- Stage 4 (shadowing): two practice sessions, recorded on the scoring sheet but not graded.

- Stage 5 (practical exam): one scored session with the director. Pass: 70 or more out of 100, and neither critical point broken.
- Annual refresher: one session for every certified broker.

Scenario bank

Scenario	What a good answer does
AOG: the booked aircraft is unserviceable 6 hours before departure	Calm, facts first; the operator's written replacement options; extra cost approved by the director, never promised on the call (Module 11.3)
The assistant refuses the 25% deposit and wants to pay after the flight	Explain the booking terms (Module 10.6) and why the operator must be secured; offer Paynode card or bank options; no exceptions without the director
The principal insists on a domestic leg on a foreign-registered aircraft	Explain cabotage in plain words; offer a local operator for that leg or a new routing; never sell it (Module 2.4)
"Another broker quoted 15% less"	Compare like for like (aircraft, year, operator, rating, inclusions); offer two or three options; margin below 7% only with director approval (Module 12.6)
A passenger is added on the day	Names to the operator at once; permits, insurance and seats confirmed in writing before you agree
The client wants to bring a dog to a strict-entry country	Destination rules and the operator's written acceptance first; offer a route and airport that work (Appendix G.4)
De-icing delays departure and the client is angry about the charge	Safety is the crew's decision; the charge is at cost with the receipt, as the confirmation says (Module 9.2)
The client asks to pay into a personal account or sends new bank details by chat	Stop: Paynode only; treat as fraud until proven otherwise (Module 3.5)
The client asks to leave a passenger's name off the manifest	Refuse politely; tell the director (Module 2.4)
Screening shows a possible sanctions match on the payer	Pause without accusing; say you need a short internal check; tell the director (Module 3.2)
The client demands a guaranteed departure time in winter	Promise only what the operator confirms in writing; explain de-icing and slots (Module 6.4)
Complaint after the flight about catering and a late car	Listen, apologise for the experience, agree what happens and by when, record it; service recovery steps in Module 11.5

Scoring sheet

Criterion	Points	Critical
Calm and courteous under pressure	20	
Correct rule, explained in plain words	30	Yes: a wrong rule fails the lab
Options offered instead of a flat no	20	
No promise the operator has not confirmed in writing	pass / fail	Yes: any such promise fails the lab
Escalates when the rules say so	15	
Written follow-up within 1 hour	15	

Template B.11 is the printable scoring sheet. The director may add new scenarios at any time; they go into the bank and into the AI practice partner.

14.5 AI practice partner in the portal

Under Training, Roleplay lab, the portal's AI plays any client, assistant, family-office manager or operator, at an easy, normal or hard level, for any scenario in the bank or one you describe yourself. You speak (where the browser supports it) or type. When you end the session, the AI scores it against the same sheet, quotes the moments that cost points and shows a model answer.

- Use it as often as you like before stages 4 and 5; at least five sessions are recommended before the practical exam.
- It is a practice partner, not an examiner: the AI can misjudge. Certification is decided only by the director's scored lab, the practical exam and the supervised bookings.
- Sessions are saved to your training record; the director sees the number of sessions and the average score.
- Never enter real client names or details: invent them, as in all training.

14.6 Post-trip debrief

Every supervised booking (stage 6) ends with a short debrief between the trainee, the mentor and operations, within 3 working days of the last landing. It is recorded in the portal (template B.9). A supervised booking counts towards sign-off only when all three have completed their part.

Measure	Scored 1 to 5 on
Pre-issue checks	How completely and how quickly the pre-issue checklist (Appendix A.1) was done, with evidence on file
Extras and changes	How clearly operational extras (de-icing, FBO and handling fees, parking) and any changes were explained to the client before and after the flight
Client satisfaction	The client's rating and comments from the follow-up (Module 11.5)

- Errors: list any critical or minor error found (critical errors are defined in How to use this manual).
- What went well, what to do differently, and one action with an owner and a date.
- The mentor and operations sign; the trainee confirms they have read the result.

Check your understanding: Module 14

14.1 What does a trainee need to pass the live negotiation lab at stage 5?

a) Any score
b) 70 or more out of 100 with no critical point broken
c) A perfect score
d) The AI practice partner's approval

14.2 Who decides certification?

a) The AI practice partner
b) The director, through the scored lab, the practical exam and the supervised bookings
c) The client
d) The operator

14.3 When does a supervised booking count towards sign-off?

a) When it is quoted
b) When the client pays
c) When the trainee, mentor and operations have completed the post-trip debrief
d) After 30 days

Appendix A Checklists

A.1 Pre-issue checklist

- ☐ KYC complete and reference recorded
- ☐ Sanctions screening record complete and clear
- ☐ Trip checked against Module 2.4 (never-sell list, cabotage, US and EU rules)
- ☐ Trip risk screen recorded; every amber point confirmed in writing; no red open
- ☐ Operator AOC and operations specifications on file; aircraft listed
- ☐ Insurance certificate on file, commercial passengers covered
- ☐ Safety audit standard met, or director approval for an unrated operator; operator not on a banned list
- ☐ Route feasible: range, runway, crew duty, permits, slots, cabotage confirmed by the operator
- ☐ Operator terms back to back with Part A
- ☐ Price at 7% (or director approval); "at cost" items listed
- ☐ Client requests and operational extras listed, each with how it is charged; fixed prices from a written supplier quote
- ☐ Airport hours, de-icing, crew plan, parking and customs checked with the operator for the planned times
- ☐ Disclosures in Module 2.2 included
- ☐ Payment set up as a Paynode request from Avinode

A.2 Operator vetting checklist

- ☐ AOC
- ☐ Operations specifications
- ☐ Insurance
- ☐ ARGUS / Wyvern / IS-BAO evidence, or the unrated-operator route
- ☐ EU Air Safety List and national bans
- ☐ Foreign permissions for the route
- ☐ Accident and enforcement history
- ☐ Sanctions screening
- ☐ Contract terms

A.3 Pre-flight checklist

- ☐ Passenger details sent to the operator
- ☐ Permits and slots confirmed
- ☐ Catering and ground transport confirmed
- ☐ Every client request and operational extra confirmed in writing
- ☐ De-icing, airport hours and crew plan rechecked against the forecast and final times
- ☐ Trip brief sent to the client
- ☐ 24-hour contact on duty; desk log updated

A.4 After-flight checklist

- ☐ Every leg followed to landing in the portal; changes told to the client at once

- ☐ Follow-up call or message within 24 hours of the last landing, logged
- ☐ Rating request sent (B.10); answer recorded when it arrives
- ☐ Score of 3 or less or a complaint: service recovery started, director told
- ☐ Operator invoice and receipts collected; items at cost recharged within 7 days through Paynode
- ☐ Supervised booking: debrief (B.9) completed by trainee, mentor and operations
- ☐ All payments settled; file closed

Appendix B Templates

B.1 Intake form

Field	Entry
Booker / lead passenger / payer (names, contacts)	
Dates and local times; flexibility	
From (city, airport, IATA / ICAO)	
To (city, airport, IATA / ICAO)	
Further legs	
Passengers (adults / children / infants)	
Nationalities	
Luggage and special items	
Pets	
Purpose of travel (if a permit needs it)	
Catering, ground transport, special requests	
Budget and payment method	
Source of enquiry	
KYC started (yes / no, reference)	
Trip risk screen (Module 2.9): colour for each of the six questions; director decision if red	

B.2 Request for quote to operators (Avinode message)

Text

Please quote an all-in price for the trip below. Please list what is included and excluded (positioning, crew overnights, landing, handling and parking, navigation, catering, fuel and surcharges, taxes, de-icing, Wi-Fi, permits), the aircraft registration and year, your safety audit status, and the quote expiry. Please also confirm whether the trip is non-stop for this load and season, and any crew-duty or permit constraints.

[Route, dates and local times, passengers, luggage, special items]

B.3 Quote email to the client

Text

Dear [name], thank you for your request. We are pleased to propose:

Aircraft: [type, year], [seats]; operated by [operator legal name as on its AOC].

Schedule (local times): [legs].

Price: USD [amount], including [inclusions]. The following are charged at cost after the flight, with receipts: [list].

This proposal is valid until [date and time]. Archē Executive acts as charter broker; the flight is operated by [operator].

To confirm, we will send our charter confirmation and a secure Paynode payment request. We never send bank details by email.

B.4 Trip brief

Contents

Trip reference; aircraft and registration; operator; departure and arrival in local time with dates; FBO name and address; arrival time at the FBO; passenger list; document reminder; catering; ground transport; Archē 24-hour contact.

B.5 KYC record and B.6 Sanctions screening record

Record	Fields
KYC	Client type; names; identity documents seen; company details and owners; payer; date; staff member; reference
Sanctions screening	Names screened; lists searched (UN, Singapore, US OFAC, EU, UK Sanctions List); date and time; result; match handling; staff member; director decision if any

B.7 Call scripts

Inbound

"Archē Executive, [name] speaking. How can I help?" – listen – "May I take a few details so I can find the right aircraft?" – capture with the intake form – "Who will be travelling and who will look after payment?" – "I will come back to you with options by [time]."

Outbound (consultants)

"Good morning, this is [name] from Archē Executive, a private jet charter broker. I am calling because [reason]. Is this a convenient moment?" – if no, ask when – if not interested, thank them and record the opt-out at once.

B.8 Desk handover log

Field	Entry
Shift and staff	
Live trips and status	
Open issues and owners	
Promised call-backs (who, when)	
Escalations to the director	

B.9 Post-trip debrief form

Debrief (supervised bookings)

Trip reference: [ref] Last landing: [date] Trainee: [name] Mentor: [name] Operations: [name]

1. Pre-issue checks (A.1): score 1–5 [ ] Evidence on file: yes / no Comment: [ ]

2. Extras and changes explained to the client: score 1–5 [ ] Comment: [ ]

3. Client satisfaction: client rating [ ] / 5 Comment from the follow-up: [ ]

Errors found: critical [list or none] minor [list or none]

What went well: [ ] What to do differently: [ ]

Action: [what] by [who] by [date]

Signed: mentor [ ] operations [ ] trainee has read [ ]

B.10 Follow-up message and rating request

Text

Subject: Your flight [route], [date] – how did we do?

Dear [name], welcome back. Thank you for flying with Archē Executive. I hope everything was as you expected.

If anything was not right, please reply to this email or call me on [number]; I will deal with it personally.

Would you rate your trip? One click is enough: 5 Excellent · 4 Good · 3 Fair · 2 Poor · 1 Very poor. You may add a comment for the aircraft, the crew or me.

We use ratings only to improve our service and choose our operators. We never publish your rating or words without your written permission.

Kind regards, [broker name], Archē Executive

B.11 Live negotiation lab scoring sheet

Scoring

Trainee: [ ] Assessor: [ ] Date: [ ] Scenarios: [ ]

Calm and courteous under pressure: [ ] / 20

Correct rule, explained in plain words: [ ] / 30 (wrong rule = fail)

Options offered instead of a flat no: [ ] / 20

No unconfirmed promise: pass / fail (any = fail)

Escalates when the rules say so: [ ] / 15

Written follow-up within 1 hour: [ ] / 15

Total: [ ] / 100 Result: pass (70+, no critical) / not yet

Best moment: [ ] To practise: [ ]

Spot the problem: model answers

Trip	Problem and action
S1	Los Angeles – Honolulu is a US domestic leg (Hawaii is a US state): never on a non-US operator.
S2	Tenerife is in Spain (Canary Islands): domestic Spanish legs on a non-EU operator need permission; check with the operator or use an EU operator.
S3	Politically exposed person: enhanced KYC and director approval.
S4	Child without parents: ask for parental consent documents; escalate any doubt.
S5	Individual seat sales: never sell per seat.
S6	Package sale: director approval (package-travel and ATOL rules).
S7	Firearms: operator and both authorities must approve; permits needed; director informed.
S8	Embargoed destination and US-made aircraft: red; stop and escalate.
S9	UK strict pet import rules and approved arrival routes: check the authority's rules and the operator's acceptance before quoting.
S10	Night curfew: operator confirms or the schedule changes.
S11	Bribery risk: refuse and report.
S12	Hong Kong and mainland China are treated separately: the operator must confirm the permission and the regime for these flights before quoting.

Appendix D Self-study library

Every link below was checked in October 2026 and is chosen for air charter brokers (people who sell flights), not aircraft sales brokers (people who sell aircraft). Links are checked again at every review of this manual; report a broken link to the director.

D.1 Avinode and Paynode

Avinode for brokers Search, TripManager quotes and contracts, empty legs, Paynode; links to the Help Center

Avinode: how air charter payments work (Paynode) Payment requests, cards, wires, fraud protection

Avinode Help Center Knowledge hub; free starter training videos (Module 14.2)

Avinode Help Center: Onboarding Starter broker videos, Trip Manager and Paynode walkthroughs

Avinode Help Center: Charter Payments (Paynode) Payment requests, sending payments, cards, matching funds

Paynode FAQ Common payment questions

Paynode payment security white paper Payment fraud and controls

D.2 Charter broker training and best practice

Air Charter Association: training Air Charter Essentials Certificate (one day, open to non-members) and Broker Qualification

Air Charter Association: Broker Qualification Levels 1 to 3; member companies only

NBAA Best Practices for Air Charter Brokering (July 2024) Recommended broker practices and the US rules

NBAA Aircraft Charter Consumer Guide What informed clients are told to check

IABI Aircraft Charter Broker Course Commercial self-paced online course; optional, not an Archē requirement

D.3 Aviation basics

SKYbrary Plain explanations of aviation terms and safety topics

D.4 Rules for brokers and charter flights

US: 14 CFR Part 295, air charter brokers (eCFR)

US: Increasing Charter Air Transportation Options, final rule (2018)

US: public charters and selling seats (NATA)

EU: EASA third-country operators (TCO) Official site blocks automated checks; open in a browser

EU: charter flights by operators from outside the EU (Swedish Transport Agency)

EU: Air Safety List (banned operators)

UK CAA: charters and air taxi flights How to tell a legal charter

UK CAA: ATOL protection When packages need ATOL

Singapore: CAAS requirements for foreign air operators

Thailand: CAAT eAIP (current edition) Open GEN 1.2 for entry, transit and departure

Thailand: permit planning (Universal Weather)

EU sanctions and business aviation: Russia and Belarus (EBAA, 2023)

D.5 Operator safety and airspace

ARGUS auditing services and ratings

Wyvern Wingman certification; site blocks automated checks, open in a browser

IS-BAO (International Business Aviation Council)

Air Charter Safety Foundation Industry Audit Standard

EASA Conflict Zone Information Bulletins

FAA prohibitions, restrictions and notices

Safe Airspace conflict-zone database (OPSGROUP)

D.6 Sanctions lists

United Nations Security Council consolidated list
US OFAC sanctions list search
EU sanctions map
UK Sanctions List search
UK: moving to a single sanctions list (28 January 2026)
Singapore: MAS targeted financial sanctions

D.7 Passengers and taxes

IATA Timatic The travel-document database handlers and operators use
IRS audit guide: air transportation excise tax
UK Air Passenger Duty rates

D.8 Aircraft manufacturers

Bombardier aircraft Site blocks automated checks; open in a browser
Gulfstream aircraft
Dassault Falcon

D.9 Operational rules

EU CAT.OP.MPA.250: ice and other contaminants, ground procedures (UK CAA regulatory library)
US 14 CFR 135.227: icing conditions, operating limitations
US 14 CFR 135.267: flight time limits and rest, unscheduled one- and two-pilot crews
ICAO Doc 9640: Manual of Aircraft Ground De-icing/Anti-icing Operations
SAE AS6285: aircraft ground deicing/anti-icing processes

Appendix E Glossary

Term	Meaning
AOC	Air Operator Certificate: an authority's approval for an operator to fly commercially
AOG	Aircraft on ground: the aircraft cannot fly because of a technical fault
ARGUS / Wyvern	Independent safety audit and rating providers for charter operators
Avinode	The marketplace Archē uses to source, quote and book flights
Back to back	Our terms to the client mirror the operator's terms to us
Block time	From moving off the parking stand to stopping at the destination
Cabotage	Flights between two points in one country, reserved for that country's carriers
Empty leg	A flight without passengers, sold cheaply on special conditions
FBO	Fixed-base operator: the private terminal and handling service at an airport
Flight time	From take-off to landing
Handler	The company at an airport that arranges fuel, parking, catering and paperwork
IATA / ICAO code	Three-letter and four-letter airport codes
IS-BAO	International Standard for Business Aircraft Operations, a safety management standard
KYC	Know your client: confirming who the client and payer are
Operations specifications	The document with an AOC listing the aircraft and operations approved
Paynode	Avinode's payment service

Term	Meaning
Permit	A country's permission for a foreign flight to land or overfly
Positioning leg	A flight without passengers to bring the aircraft to the start or back to base
PPR	Prior permission required, for example for parking at a busy airport
PEP	Politically exposed person: a senior public official, or a family member or close associate
NOTAM	Notice to air missions: official notice of airspace or airport restrictions
CZIB	EASA Conflict Zone Information Bulletin
FET	US federal excise tax on air transportation
RFQ	Request for quote sent to operators
Slot	An approved take-off or landing time at a busy airport
TCO	EASA third-country operator authorisation for non-EU operators flying into the EU
UTC (Zulu)	The single world time used in aviation

Appendix F สรุปกฎสำคัญ (Thai summary of the critical rules)

ฉบับภาษาไทยนี้เป็นสรุปเพื่อช่วยความเข้าใจเท่านั้น หากมีข้อความใดไม่ตรงกัน ให้ยึดฉบับภาษาอังกฤษเป็นหลัก

1. อาร์เช่ เอ็กเซ็กคิวทีฟ เป็นนายหน้าเช่าเหมาลำ ไม่ใช่สายการบิน ต้องแจ้งลูกค้าเป็นลายลักษณ์อักษรทุกครั้ง พร้อมชื่อผู้ให้บริการการบินตามใบรับรองผู้ดำเนินการเดินอากาศ (AOC)
2. ขายเฉพาะการเช่าเหมาลำทั้งลำให้ลูกค้ารายเดียว ห้ามขายเป็นรายที่นั่ง
3. ห้ามขายเที่ยวบินภายในประเทศด้วยเครื่องบินของผู้ให้บริการต่างชาติ (คาโบทาจ) เว้นแต่ผู้ให้บริการยืนยันเป็นลายลักษณ์อักษรว่ากฎหมายอนุญาต และห้ามขายเที่ยวบินภายในสหรัฐอเมริกาทั้งหมดจนกว่าผู้อำนวยการจะอนุมัติ
4. ต้องทำ KYC และตรวจสอบรายชื่อผู้ถูกคว่ำบาตรของลูกค้า ผู้ชำระเงิน และผู้โดยสารทุกคน ก่อนออกเอกสารยืนยันการจอง หากพบชื่อที่อาจตรงกัน ให้หยุดและรายงานผู้อำนวยการทันที
5. ใช้เฉพาะผู้ให้บริการที่มี AOC ประกันภัย และมาตรฐานความปลอดภัยตามคู่มือ หรือได้รับอนุมัติจากผู้อำนวยการ
6. ราคาต่อลูกค้า = ต้นทุน ÷ 0.93 (กำไร 7% ของราคาขาย) ห้ามใส่ตัวเลขที่ไม่มีแหล่งที่มา ค่าใช้จ่ายที่กำหนดล่วงหน้าไม่ได้ ให้เรียกเก็บตามจริงหลังเที่ยวบินพร้อมใบเสร็จ
7. การจองทั้งหมดผ่าน Avinode และการชำระเงินทั้งหมดผ่าน Paynode ห้ามส่งรายละเอียดบัญชีธนาคารทางอีเมลหรือแอปแชต
8. ข้อมูลส่วนบุคคลเก็บไว้ใน Avinode และ CRM ของอาร์เช่เท่านั้น
9. ความปลอดภัยเป็นการตัดสินใจของกัปตันและผู้ให้บริการการบินเท่านั้น ห้ามกดดันให้บิน
10. ทุกคำขอต้องผ่านการคัดกรองความเสี่ยงของเที่ยวบิน 6 ข้อ (Trip risk screen) และตรวจรายการเฝ้าระวัง (Watchlist) ฉบับปัจจุบันก่อนหาเครื่องบิน
11. เมื่อไม่แน่ใจ ให้หยุดและสอบถามผู้อำนวยการ

Appendix G Watchlist (maintained by the director)

This page lists places and topics that need extra checks. The director updates it at least monthly from the official sources below and whenever a source changes. Always use the current version in the Archē document folder. A place on this list is not automatically refused: it tells you which check to run. A place not on the list is not automatically safe: the trip risk screen still applies.

Item	Detail
Watchlist reviewed	October 2026, by the director
Next review	November 2026

G.1 Territories where a leg may be domestic

Country	Territories and islands to watch
United States	Alaska, Hawaii, Puerto Rico, US Virgin Islands, Guam, Northern Mariana Islands, American Samoa
Spain	Canary Islands, Balearic Islands, Ceuta, Melilla
Portugal	Madeira, Azores
France	Corsica; overseas departments Guadeloupe, Martinique, French Guiana, Réunion, Mayotte
Italy	Sicily, Sardinia
China	Hong Kong and Macau are treated separately from mainland China; the operator confirms the regime for every flight between them

G.2 Sanctions and embargoes

Always screen against the official lists in Appendix D; the summary below only tells you where to look harder.

- Broad embargoes in force under one or more of the UN, US, EU or UK regimes include Iran and North Korea; the US also keeps a broad embargo on Cuba, which can affect flights with US-made aircraft.
- Russia and Belarus: wide-ranging measures, including the EU ban on aircraft chartered or controlled by Russian nationals (Module 2.4); the Russian-occupied regions of Ukraine (Crimea, Donetsk, Luhansk) are under near-total restrictions.
- Syria: sanctions programmes have changed; check the current status on each list before any quote.
- Any other country with UN, US, EU, UK or Singapore measures: director decision.

G.3 Conflict zones and airspace notices

EASA publishes Conflict Zone Information Bulletins for European operators, and the FAA publishes prohibitions and security notices for US operators. As at October 2026 the FAA lists international security notices for: Afghanistan, Belarus, Central America, Colombia, Ecuador, Haiti, Iran, Iraq, North Korea, Libya, Mali, Mexico, the Pacific Ocean, Panama, the Persian Gulf and Gulf of Oman, the Russian Federation, Saudi Arabia, Somalia, Syria, Ukraine and Yemen. A notice can range from a full ban to advice for part of the airspace; it applies to the operator, not to the whole country. Any route touching these areas: amber at least; the operator confirms routing and insurance in writing.

G.4 Pets

Rabies-free countries with strict import routes and approved arrival airports, for example the United Kingdom, Ireland, Australia, New Zealand, Japan, Singapore and the US state of Hawaii: check the official authority's rules before quoting any pet travel.

G.5 Strict permit regimes for foreign operators

Examples where lead times and rules for foreign operators are known to be demanding: China, India and Russian airspace. Ask the operator for the lead time before quoting.

G.6 Taxes

- United States: federal excise tax on air transportation; generally collected by the person who receives payment, and a broker acting as principal can be required to collect it.
- European Union: VAT rules differ by country and by type of trip.
- United Kingdom: Air Passenger Duty, with a higher rate for aircraft of 20 tonnes or more equipped for fewer than 19 passengers.
- Singapore: GST, as advised by our accountant.

G.7 Countries Paynode cannot pay to or from

Paynode cannot send or receive funds for these jurisdictions (Avinode Help Center, checked October 2026; Avinode says the list can change): Belarus; Crimea, Donetsk, Kherson, Luhansk and Zaporizhzhia regions of Ukraine; Cuba; Iran; Kazakhstan; Libya; Myanmar; North Korea; Russia; South Sudan; Sudan; Syria; Venezuela. Paynode also refuses some activities, including cryptocurrency services and weapons and military items. Because every Archē payment runs through Paynode, a payer or operator in one of these places is a red answer on the trip risk screen: stop and tell the director. Several are not under a broad sanctions embargo; the reason we stop is that we cannot take or make the payment.

Avinode: what our payments platform cannot support

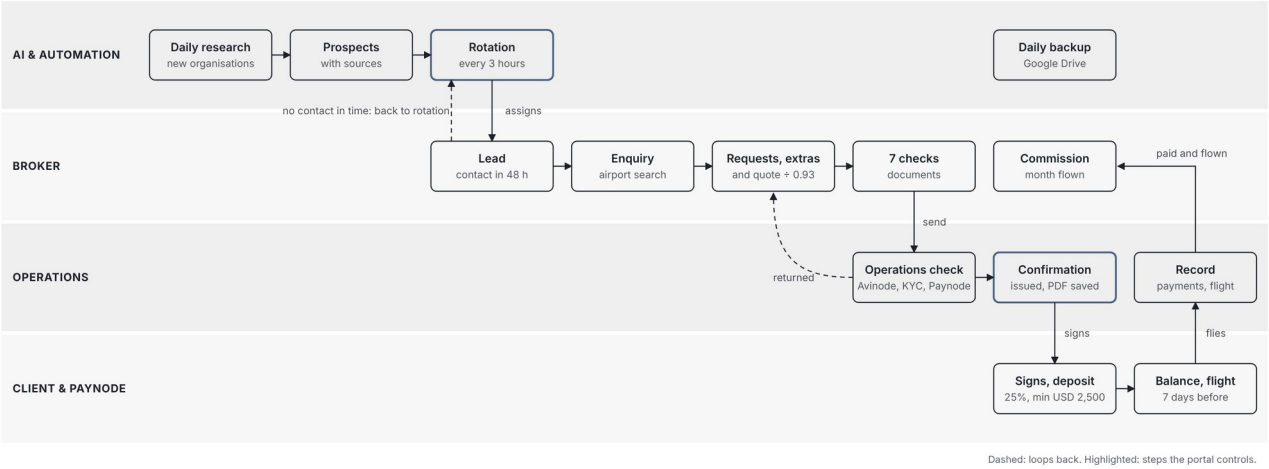

G.8 Sources the director checks

EASA Conflict Zone Information Bulletins
FAA prohibitions, restrictions and notices
EU Air Safety List
UN Security Council consolidated list
US OFAC sanctions list search
EU sanctions map
UK Sanctions List search
Singapore: MAS targeted financial sanctions
IRS audit guide: air transportation excise tax

Appendix H Portal guide

How every part of the Archē broker portal works, what to do when something goes wrong, and how to get the most out of it. Guide version 1.5, 19 October 2026. The same guide is in the portal under Help.

H.0 How a trip moves through the portal

Read the diagram left to right. The AI researches organisations every day and the rotation assigns them to brokers. The broker turns a lead into an enquiry, adds requests and extras and the operator quote, completes the checks and sends the trip to operations. Operations checks it on Avinode, completes KYC and the Paynode request and issues the confirmation. The client signs and pays through Paynode, the trip flies, operations records payments and the flight, and commission follows. Dashed arrows loop back: a lead with no contact in time returns to the rotation, and a trip with a problem returns to the broker.

H.1 Joining, roles and access

Who uses it: Everyone

Only approved people can use the portal, and each person sees only what their role needs.

How it works

1. Open the portal link while signed in to claude.ai.
2. First time: fill in Join with your full legal name as on your contract, your role, the country you work from and your academy completion code, and tick the portal agreement.
3. Wait for approval. The director approves every broker before the first enquiry.
4. Your role decides what you see: brokers and consultants see their own trips, leads and commission; operations sees every trip and the operations queue; the owner sees everything.

Troubleshooting

If you see	Do this
The portal says it could not open	Open it from claude.ai while signed in, using the link you were given. A copied link opened in another browser profile will not sign you in.
I am stuck on Request sent	The director has not approved you yet. Ask the director; approval needs your contract and academy code.
I see Access ended	Your access was ended. Contact Archē operations if you think this is a mistake.
I cannot see a trip or lead a colleague mentions	Brokers see only their own trips and leads. Ask operations.

Tips and tricks

- Use the same claude.ai account every time: your trips and leads are tied to it.
- Bookmark the portal link on your phone; every page works on a small screen.

H.2 Dashboard

Who uses it: Brokers, consultants and operations

Your opening page: progress this month, your place in the team and every outstanding task, most urgent first.

How it works

1. Read the progress tiles: standard bookings against the monthly target, commission earned this month, quote-to-confirmation rate, rank and prospects added against the minimum.
2. Work the Outstanding list from the top. Red dots are urgent: an overdue lead or a trip returned by operations.
3. Tap a task to open the lead or trip it refers to.
4. Compare yourself with the team by points, confirmed trips, enquiries, prospects added or follow-up score.

Troubleshooting

If you see	Do this
My rank shows a dash	The leaderboard updates at each assignment round, every 3 hours. It appears after the first round of the month.
Commission shows USD 0 although I have flown trips	Commission counts only trips that have flown and whose client payment has cleared. Ask operations to record the payment.
A task stays on the list after I did it	Tasks clear when the portal sees the change: log the contact, update the trip or send it to operations.

Tips and tricks

- Start every day on the dashboard and clear the red items first.
- Overdue leads move to another broker at the next round: a two-minute logged contact keeps the lead yours.
- Use the team comparison to see where you lose points; follow-up score is usually the quickest win.

H.3 Today (owner)

Who uses it: Owner

Everything that needs the owner, on one page, from any device.

How it works

1. Read Your decisions: trips waiting for operations, late payments and other red flags, prospects that went cold with three brokers, and join requests.
2. Restart a cold prospect's rotation, mark it Do not contact, or open it to assign it yourself.
3. Check Prospect rotation: last round, what moved and the figures per broker. Use Preview to see the next round, Run now to run it.
4. Check Running in the background: prospect research and Google Drive backup.
5. Use the analytics: gross profit from trips flown over six months, this month's funnel and confirmed trips by broker.

Troubleshooting

If you see	Do this
A background job shows not run yet or an old date	Scheduled jobs stop when the claude.ai usage limit is reached. Check Settings > Usage in claude.ai; the job runs again at its next time.
Run now does nothing	Another round may be running. Wait a minute and reload.

Tips and tricks

- Open Today once a day: it also triggers the automatic Drive copy of new documents and, when due, the database.
- A prospect that went cold three times is often a wrong-fit organisation: consider Do not contact rather than another rotation.

H.4 New enquiry and airport search

Who uses it: Brokers, consultants with booking rights, operations with booking rights

Capture the trip once, correctly, with the right airports.

How it works

1. Choose New enquiry, or Open an enquiry from a lead.
2. Enter the client: name, company, email, phone, country of residence and the payer if different.
3. For each leg type a city, airport name or code (for example London) and pick the airport from the list. The portal stores the ICAO code and shows the airport name.
4. Add date, local time and passengers per leg, the aircraft category and any notes.
5. Save. The trip appears under My trips as Enquiry.

Troubleshooting

If you see	Do this
Save says choose the airport from the list	The text typed is not a known airport. Type a city or code and pick one of the suggestions.
The airport I need is not offered	The list holds 7,009 airports suitable for jets. Type the four-letter ICAO code; if it is still missing, ask operations, as the runway may be too short for jets.
Times look wrong	Times are local at the departure airport. Confirm the time zone with the client in writing.

Tips and tricks

- Type the city, not the airport: the list shows every suitable airport nearby, including business-aviation fields such as Biggin Hill or Le Bourget.
- Write special requests in the notes: the portal turns many of them into suggested requests and extras.
- Open enquiries from leads with Open an enquiry, so the trip is linked to the prospect and counts on the leaderboard.

H.5 Client requests and operational extras

Who uses it: Brokers until the trip goes to operations; operations until the confirmation is issued

List every request and every operational need, with how it is charged, so the confirmation is complete and nothing is invoiced by surprise.

How it works

1. Open the trip. Under Client requests and Operational extras charged to the client, read the suggestions.
2. Tap a suggestion to add it, or Add request / Add extra for your own.
3. For each line choose the category, describe it, and choose how it is charged: included in the charter price, at cost after the flight, or fixed price.
4. For a fixed price enter the supplier's written price. The client pays that price divided by 0.93, rounded up; the portal shows it.
5. Use AI: suggest more for anything the rules or route may need.

Troubleshooting

If you see	Do this
I cannot edit the lines	The trip is with operations or confirmed. Ask operations to change it.
The confirmation says a fixed price is missing	A line set to fixed price has no supplier price. Enter it, or change the line to at cost.
A suggestion does not apply	Ignore it; suggestions are prompts to ask the operator, never facts.

Tips and tricks

- Ask about catering, cars, pets, children, luggage and allergies on the first call: changes later cost time and money.
- Winter, night departures, waiting days and international arrivals almost always bring operational extras: confirm them before quoting.
- Use fixed price only with a written supplier quote; anything that depends on the day is at cost.

H.6 Operator quote and price

Who uses it: Brokers

Record the operator's all-in quote so the portal sets the client price at 7%.

How it works

1. From Avinode, enter the operator's legal name as on its AOC, aircraft type, registration and Avinode trip ID.
2. Enter the operator all-in price and any direct trip costs not in it (supplier items Archē buys).
3. Read the price preview: client price = (operator price + direct costs) ÷ 0.93, rounded up.
4. Save. The trip moves to Quoted.

Troubleshooting

If you see	Do this
The price looks too high or low	Check you entered the all-in operator price, including positioning, and no extras twice.
Operations changed my operator price	Operations confirms the price on Avinode; the confirmed figure is used and the difference is flagged.

Tips and tricks

- Never round down and never quote below 7% without the director's approval.
- Re-confirm availability and price with the operator before the offer expires.

H.7 Documents

Who uses it: Brokers until the trip goes to operations

Keep every document for the trip in one place, never in email.

How it works

1. Open the trip, choose the document type and the file, and select Attach.
2. Attach the operator quote, AOC, insurance certificate, safety audit evidence and the client's KYC documents.
3. Open any document from the trip file.

Troubleshooting

If you see	Do this
Attach does nothing	Choose a file first. Large files take a few seconds.
I cannot attach after sending to operations	Documents are locked with the trip. Send them to operations through the portal; they attach them.

Tips and tricks

- Never send passports or contracts by email or chat apps.
- Name scanned files clearly before uploading.

H.8 Pre-issue checks and sending to operations

Who uses it: Brokers

Hand operations a complete, compliant trip.

How it works

1. Tick the seven broker checks only when each is done and recorded: never-sell list, trip risk screen, AOC, insurance, safety audit, routing and permits, operator terms.
2. Send to operations. The button works only with a client name, at least one leg, an operator price and all seven checks.

Troubleshooting

If you see	Do this
Send to operations is greyed out	One of the required items is missing; the note under the button lists them.
The trip came back as Returned	Read the operations note at the top of the trip, fix it and send again.

Tips and tricks

- Run the AI check before sending; it catches cabotage, permits and missing information.
- A trip returned twice costs the client's confidence: complete it the first time.

H.9 Operations queue

Who uses it: Operations, owner, brokers with booking rights

Check, confirm and record every trip that brokers send.

How it works

1. Open Operations; take the oldest trip in Waiting for operations.
2. Confirm the operator price on Avinode and enter direct trip costs.
3. Complete KYC and sanctions screening and tick the record.
4. Create the Paynode payment request from the Avinode trip and enter its reference.
5. Save, then Prepare and issue confirmation, or Return to broker with a note.

Troubleshooting

If you see	Do this
I see a note instead of the operations panel	It is your own trip. Another operations member or the director handles it.
The broker's operator price differs from Avinode	Use the Avinode figure; the difference is flagged in Control.

Tips and tricks

- Work the queue oldest first; check it at least twice a day.
- Never take payment details by email; every client pays through the Paynode request.

H.10 Charter confirmation

Who uses it: Brokers prepare; operations and the owner issue

Produce the signed contract: booking details, requests and extras, Part A and Part B.

How it works

1. Open Charter confirmation from the trip. Fill in charterer address, KYC reference, lead passenger, aircraft year and seats, operator AOC and authority, signatory.
2. Read the live checks on the right: fix every red item and every missing field.
3. Use AI check for a second look.
4. Operations issues it: the portal assigns the reference, saves the PDF to the trip and locks it.
5. A change after issue: Prepare revision, then Issue revision n.

Troubleshooting

If you see	Do this
Issue is greyed out	A required field or check is missing; the list shows which.
Company details are missing	The owner must fill in Settings > Company details once.
The PDF did not save	Download it from the confirmation screen and attach it to the trip.

Tips and tricks

- Fill the confirmation while the broker still has the details fresh; drafts save automatically.
- The deposit is 25% of the charter price (at least USD 2,500); fixed extras are paid with the balance 7 days before departure.

H.11 Payments, flight and commission

Who uses it: Operations records; everyone sees their own commission

Record money and flights so commission is right and on time.

How it works

1. Operations records the date the client payment cleared in Paynode.
2. Operations records the operator payment through Paynode.
3. After the last leg, operations records the flight date.
4. Commission appears in the month the trip flew, paid by the 15th of the next month; the owner marks it paid.

Troubleshooting

If you see	Do this
My trip flew but no commission	The client payment has not been recorded, or the flight date has not. Ask operations.
Commission seems low	Commission is a share of gross profit, including the margin on fixed-price extras; at-cost items carry no margin.

Tips and tricks

- Chase unpaid confirmations after 5 days: the Control page flags them.
- Record flights the day they happen, so the dashboard stays true.

H.12 My leads and adding prospects

Who uses it: Brokers and consultants

Work the organisations assigned to you and add the ones you know.

How it works

1. Open My leads. Leads are sorted by when contact is due.
2. Open a lead, read why them and how to approach, use a contact route, then log the contact with channel, outcome and a note.
3. Add a prospect: organisation, segment, country, public source link, contact route and why they charter.
4. Add or correct a contact route on any lead to keep the database current.
5. Open an enquiry from a lead when the organisation has a trip.

Troubleshooting

If you see	Do this
My new prospect says Being checked	It is checked for duplicates at the next round, within 3 hours.
It says Already known	Another broker added it first; it stays with them. Keep adding new ones.
A lead disappeared	It went cold and moved to another broker, or it was marked Do not contact.

Tips and tricks

- Contact new leads the same day: the 48-hour clock starts at assignment.
- Every organisation you add earns points and a bigger share of new leads; ten a month is the minimum, not the target.
- Anyone who opts out is Do not contact at once, for everyone.

H.13 Prospects database

Who uses it: Owner and operations

The global list of organisations, with sources, contact routes and status.

How it works

1. Filter by region, country, province, segment, type and status, or search.
2. Open a prospect to see why, how to approach, contact routes, source, assignment history and the contact log.
3. Assign it to a broker, or mark Do not contact.
4. Add a prospect with its public source.

Troubleshooting

If you see	Do this
A prospect has no contact routes	The daily AI review adds them over time; brokers can add them too.
Status shows Your decision	It went cold with three brokers. Restart the rotation or mark Do not contact.

Tips and tricks

- Use the region tiles to see where coverage is thin, then add prospects there.
- Never store private individuals' details; organisations and roles only.

H.14 Prospect rotation

Who uses it: Runs automatically; owner and operations can run it

Give every broker a fair, steady flow of leads and never let a prospect go cold.

How it works

1. Every 3 hours, and when the owner or operations opens the portal, the round imports prospects brokers added, catches duplicates, merges contact updates and assigns free prospects.
2. Each broker is scored on country and region fit, follow-up record, conversions and fair share; brokers who add prospects get a bigger share.
3. No first contact within 48 hours, or no follow-up for 14 days, and the lead moves to the next broker with its history. After three brokers it goes to the owner.
4. Not now leads come back after 90 days to a different broker.

Troubleshooting

If you see	Do this
A broker gets no new leads	They may be at the open-lead limit, have leads going cold, or be below the monthly minimum late in the month.
Rules need changing	The owner changes them in Settings > Prospect assignment and incentives.

Tips and tricks

- Use Preview on Today before changing the rules, to see their effect.
- Keep the number of open leads per broker realistic: fewer, worked leads beat many cold ones.

H.15 Points and leaderboard

Who uses it: Brokers and consultants

Make good habits visible and reward them.

How it works

1. Points this month: 3 per organisation added, 1 per lead contacted per day, 1 per contact route added or corrected (up to 20), 10 per enquiry from a lead, 25 per trip flown, minus 3 when a lead goes cold.
2. See your rank on the dashboard and in My leads.

Troubleshooting

If you see	Do this
Points did not change after I logged a contact	Points update at each round, every 3 hours.

Tips and tricks

- Flown trips are worth the most; but daily contacts and added prospects keep you ahead early in the month.

H.16 AI assistant and co-pilot

Who uses it: Everyone

A second pair of eyes on every trip, and answers to questions about the rules.

How it works

1. On a trip, use the co-pilot: check the trip, draft an email or suggest the next step.
2. On a lead, use Suggest approach for a first message with an opt-out line.
3. In Assistant, ask any question about the rules, a trip or an operator.
4. The owner and operations can write the daily briefing in Control.

Troubleshooting

If you see	Do this
The co-pilot asks for permission	Allow Claude when asked, or in the artifact's Permissions menu.
Too many requests	Wait a minute and try again.

Tips and tricks

- The AI never sees client names or contact details; describe the trip, not the person.
- Treat AI output as a draft: you are responsible for what you send.

H.17 Control

Who uses it: Owner and operations

See signs that business is leaving the portal or that money is late.

How it works

1. Read the flags: unpaid confirmations, old quotes and enquiries, price differences, the same client with two brokers, low quote-to-booking rates.
2. Open the trip behind a flag and act.
3. Write today's AI briefing for the outlook, risks and coaching.

Troubleshooting

If you see	Do this
A flag will not clear	Fix the cause: record the payment, update or withdraw the trip.

Tips and tricks

- A broker with many quotes and few confirmations may be booking outside the portal: talk to them early.

H.18 Team and booking rights

Who uses it: Owner

Approve people, end access and give booking rights.

How it works

1. Approve or decline requests to join.
2. Give a broker booking rights with Can book, and Editor access in the claude.ai Share menu.
3. End access when someone leaves, and remove them from the Share menu the same day.

Troubleshooting

If you see	Do this
A broker with booking rights still sees only their own trips	They also need Editor access in the Share menu.

Tips and tricks

- Editors can read the whole portal, including other brokers' trips and commission: give booking rights only to trusted people.

H.19 Settings

Who uses it: Owner

Commercial terms, company details, assignment rules and backup.

How it works

1. Terms: margin, standard booking value, commission rates.
2. Company details: printed on every confirmation; needed before the first issue.
3. Prospect assignment and incentives: contact times, limits, minimum adds, extra lead share, leaderboard visibility.
4. Backup: download a full copy, or back up to Google Drive now.

Troubleshooting

If you see	Do this
Brokers do not see a rule change	Rules apply from the next round; ask brokers to reload the portal.

Tips and tricks

- Change commercial terms only at the start of a month, so commission stays easy to check.

H.20 Security and access log

Who uses it: Owner

Keep the portal ringfenced.

How it works

1. Review who opened the portal and when.
2. Keep the Share menu to named people: brokers Contributor, operations Editor; never a public link.

Troubleshooting

If you see	Do this
Someone unknown appears in the access log	End their access and remove them from the Share menu at once.

Tips and tricks

- Every screen carries a watermark with the viewer's name: screenshots are traceable.

H.21 Backups

Who uses it: Owner

An independent copy of everything in the portal.

How it works

1. Every day at 02:17 Bangkok time the database is copied to Google Drive, checked file by file.
2. When the owner opens the portal, new documents and issued PDFs are copied to Google Drive byte for byte.
3. Settings > Backup: download a full copy at any time.

Troubleshooting

If you see	Do this
Google Drive asks for permission	Allow the portal to use Google Drive once.
Backup shows an old date	The scheduled job may have hit the usage limit; use Back up to Google Drive now.

Tips and tricks

- Download a full copy before any big change to settings or the team.

H.22 Help and FAQ

Who uses it: Everyone

Answers in seconds, and a FAQ that grows from real questions.

How it works

1. Open Help. Search the FAQ and the feature guides.
2. Ask a question: the AI answers at once from the manual and this guide, and your question is saved.
3. Questions asked often are added to the FAQ automatically, without names or client details. The owner can edit or remove any FAQ entry.

Troubleshooting

If you see	Do this
The AI answer seems wrong	Mark it Not helpful; the owner sees it and corrects the answer.

Tips and tricks

- Search before asking: most answers are already there.
- Never put client names or passport details in a question.

H.23 Flight following

Who uses it: Operations and the 24/7 desk (brokers see the status)

Every trip is followed until the last passenger has landed, so the client hears about a change from us first.

How it works

1. Open the trip. The Flight following panel appears once the confirmation is issued.
2. For each leg, set Departed, Landed, Delayed, Diverted or Cancelled with the operator's local time and a short note.
3. Tell the client at once about any delay, diversion or cancellation, and tell the broker.
4. When every leg has landed and the client has paid, press Last leg landed: record flight. The trip moves to Flown and aftercare opens for the broker.

Troubleshooting

If you see	Do this
The record-flight button does not appear	Every leg must be Landed or Cancelled, and the client payment must be recorded first.
I cannot change a leg	Only operations and the owner edit leg status; brokers see it read-only.

Tips and tricks

- Take times from the operator's movement message, never estimate.
- Keep notes short and factual: the broker reads them before calling the client.

H.24 Aftercare, rating and service recovery

Who uses it: Brokers; the owner sees everything

Each client is called within 24 hours of the last landing, asked for a rating, and any problem is put right (manual 11.5).

How it works

1. After the flight, the trip shows an Aftercare panel with a due time and a checklist.
2. Call or message the client personally, then press Log follow-up with a short note.
3. Press Email the rating request: your email opens with template B.10 and one-click 1–5 links that reply to the bookings address.
4. When the client answers, record the rating: overall, aircraft, crew and broker, the comment, and tick the box only if the client agreed in writing that we may quote it.
5. Any overall score of 3 or less opens Service recovery: call the client within 1 working day, then record what was agreed. The director is told automatically.
6. The file closes when payments are settled, the follow-up and rating request are logged, and any recovery and debrief are done.

Troubleshooting

If you see	Do this
Follow-up shows as overdue	More than 24 hours have passed since the last landing. Call the client now and log it.
The client has no email on the trip	Add the address in your email before sending, and add it to the trip next time.

Tips and tricks

- Ratings go into the operator scorecard: they decide which operators we book.
- Never publish a rating or comment without the client's written permission, and never write or ask for reviews in exchange for anything.

H.25 Post-trip debrief (supervised bookings)

Who uses it: Trainees in stage 6, mentors and operations

Each supervised booking is reviewed by trainee, mentor and operations within 3 working days (manual 14.6, template B.9).

How it works

1. The owner ticks Supervised for the broker in Team.
2. After each of that broker's flights, the Aftercare panel shows the debrief with three parts.
3. Each person scores the three measures from 1 to 5: pre-issue checks, extras explained to the client, and client satisfaction, then adds errors found, what went well, what to change and one action with an owner and a date.
4. The booking counts towards sign-off only when all three parts are signed. Team shows each broker's count out of 10.

Troubleshooting

If you see	Do this
The debrief does not appear	The broker is not ticked as Supervised in Team, or the trip is not flown yet.

Tips and tricks

- Be specific: one clear action is worth more than a long list.

H.26 Roleplay lab

Who uses it: Everyone in training; the owner sees the team summary

Practise difficult calls out loud with an AI client, assistant, family-office manager or operator, and get scored on the lab sheet (manual 14.4–14.5).

How it works

1. Open Training, then Roleplay lab.
2. Choose one of the 12 scenarios or describe your own, who you speak to and the level.
3. Press Start the call. Type or press Speak, and tick Read the other side's replies aloud if you want to hear them.
4. Press End and score. You get a score out of 100, the moments that cost points and a model answer. Sessions are saved to your record.

Troubleshooting

If you see	Do this
Speak does not appear	Your browser does not support speech input. Type instead; Chrome and Edge support it.
The AI is busy	Wait a minute and try again.

Tips and tricks

- Never use real client names in practice.
- The AI score is for practice. Certification is decided by the director's scored lab.

H.27 Regional cards

Who uses it: Everyone; the owner edits and approves

Green, amber and red rules per region for live enquiries (manual Appendix J), with the date each card was last verified.

How it works

1. Open Training, then Regional cards, and choose the region.
2. Green: proceed. Amber: the operator confirms in writing before we quote. Red: stop and tell the director.
3. Owner: Edit a card, or Mark verified today after checking the sources.
4. The daily intelligence run proposes changes from the official sources. The owner checks each source, then approves or dismisses. The AI never changes a card on its own.

Troubleshooting

If you see	Do this
A card looks out of date	Tell the owner; check the watchlist and the official source before quoting.

Tips and tricks

- The card does not replace the trip risk screen, which is still recorded for every enquiry.

H.28 Operator scorecard and service scores

Who uses it: Owner and operations

Shows how clients rate each operator and each broker, from the ratings recorded in aftercare.

How it works

1. Open Control and scroll to Operator scorecard and Service scores.
2. Prefer the operators with the highest scores; review any operator averaging 3.5 or less with the director.
3. Use broker scores in coaching, together with the number of scores of 3 or less.

Troubleshooting

If you see	Do this
No ratings yet	Scores appear once brokers record client ratings after flights.

Tips and tricks

- Small numbers mislead: look at how many trips were rated.

Appendix I Portal FAQ

The first 15 questions below were written before launch. From then on the FAQ grows from real questions: everyone can ask in the portal under Help, the AI answers at once, and questions asked often are added to the FAQ without names or client details. The owner reviews every entry. The live FAQ in the portal is always the current one.

1. How is the client price calculated?

Operator all-in price plus direct trip costs, divided by 0.93 and rounded up. Archē's margin is 7% of the price the client pays. A lower margin needs the director's approval.

2. When does the client pay?

25% of the charter price on signature, at least USD 2,500; the balance, including fixed-price extras, 7 calendar days before the first departure. If departure is less than 7 days away, the full price on signature. Items at cost are invoiced after the flight and paid within 10 calendar days.

3. What is the difference between a fixed-price extra and an extra at cost?

Fixed price: a supplier quoted it in writing before booking; the client pays the supplier price ÷ 0.93, rounded up, with the balance. At cost: the amount depends on the day (de-icing, extra parking, out-of-hours fees); it is invoiced after the flight with the receipt, without margin.

4. Why did my lead move to another broker?

No first contact was logged within 48 hours of assignment, or no follow-up within 14 days. The lead moves with its full history. Log every contact in the portal to keep your leads.

5. How many prospects must I add?

At least 10 organisations a month, each with the public source where you found it. Adding more earns points and a bigger share of new leads.

6. Do I get a fee for prospects I add?

No. Commission rewards the booking. Adding prospects earns points, a place on the leaderboard and a bigger share of new leads, and you work your own finds first.

7. Who issues the charter confirmation?

Operations or the owner, after the operator price, KYC, sanctions screening and the Paynode request are done. Nobody issues, prices or records payment on their own booking.

8. The airport I want is not in the list. What do I do?

Type the four-letter ICAO code. The list holds airports suitable for jets; if it is still missing, ask operations, because the runway may be too short.

9. Can a client pay by bank transfer to us directly?

No. Clients pay only through the Paynode payment request. Never send or accept bank details by email, chat or messaging apps.

10. Can I quote a domestic flight on a foreign aircraft?

No. Domestic legs on foreign-registered aircraft are cabotage and are refused in most countries. Use a local operator for the domestic leg or redesign the trip.

11. What does de-icing cost?

It depends on the day, the aircraft and the airport. Never give a figure: list it as an operational extra at cost, and pass on the operator's written estimate only as its estimate if the client asks.

12. Can a passenger bring a dog?

Only with the destination's entry rules met and the operator's written acceptance. Some countries accept pets only on approved routes and airports. Ask before quoting.

13. The client wants to change the trip after confirmation. What happens?

Operations gets the operator's new price in writing and issues a numbered revision. Changes to routing or passengers need new permits and may be refused; any difference is paid before the flight.

14. When is commission paid?

For trips that have flown and whose client payment has cleared, in the month of the flight, by the 15th of the next month.

15. Who sees my leads and trips?

You, operations and the director. Other brokers cannot see them. Client details stay in the portal; copying them is blocked.

16. How soon after a flight must I call the client?

Within 24 hours of the last landing. Log it in the trip's Aftercare panel; after 24 hours it shows as overdue on Today and your dashboard.

17. Can we publish a client's rating or comment?

Only with the client's written permission, recorded with the rating. We never write reviews ourselves or offer anything in return for a review.

18. What happens when a client rates 3 or less?

Service recovery: call the client within 1 working day, agree what happens and by when, and record it. The director is told automatically.

19. Does the Roleplay lab score count for certification?

No. It is practice. Certification is decided by the director's scored live lab (manual 14.4).

20. Will Archē pay for the ACA Air Charter Essentials course?

Proposed: yes, after you pass the written exam and 3 supervised bookings. Archē pays the ACA directly; a clawback applies if you leave within 12 months. See manual 14.1; the terms are confirmed in your agreement.

Appendix J Regional quick-reference cards

One card per region, for live enquiries: green means proceed, amber means the operator or its trip support confirms in writing before we quote, red means stop and tell the director. The cards summarise Module 2, the trip risk screen (Module 2.9) and the watchlist (Appendix G); they never replace them, and the trip risk screen is still recorded for every enquiry.

Item	Detail
Cards version	1.0, October 2026
Last verified	October 2026, by the director, against the official sources in Appendix G.8 and D.4
How the cards stay current	The portal's intelligence run checks the official sources and proposes changes; the AI never changes a card. The director checks each proposal against the official source and approves it; only then does the card change, with the new date. In the portal, every card shows its sources and the date it was last verified.

J.1 Europe: EU, EEA, Switzerland and the United Kingdom

Colour	Triggers
Green	Whole aircraft from an EU/EEA/UK operator with a checked AOC; international or same-carrier-country flights; clean screening
Amber	Non-EU operator into or within Europe (needs an EASA third-country operator authorisation and each state's permits, confirmed in writing); any leg that may be domestic, including territories (G.1); package with hotel or event (ATOL in the UK); de-icing season
Red	Leg inside the EU on a non-EU operator without written permission; Russian national (including dual) or company controlled by one with any EU point, or a Russian-registered aircraft; operator on the EU Air Safety List; seats sold individually; payer or operator in a G.7 country

Source sections: Modules 2.4, 2.5, 2.9; Appendix G.1, G.2, G.7.

J.2 Middle East and Africa

Colour	Triggers
Green	Experienced operator with permits handled through its trip support; whole aircraft; clean screening
Amber	Landing and overflight permits, sponsor rules and lead times vary by state: operator confirms in writing; routes near FAA or EASA conflict-zone notices (G.3); PEP clients; third-party payers
Red	Embargoed destination or sanctions match; payer or operator in a G.7 country (for example Libya, South Sudan, Sudan, Syria); lead time impossible to meet

Source sections: Modules 2.5, 2.9, 3.2; Appendix G.2, G.3, G.7.

J.3 Asia-Pacific: Singapore, Thailand and the region

Colour	Triggers
Green	International flight on an operator with the needed permits; Singapore slot and Air Transport Permit planned (Changi slot at least 72 hours ahead); clean screening
Amber	Thailand: CAAT permits, slots and parking approval at the main Bangkok airports and Phuket, full passenger and crew details; China, India and Russian airspace (strict permit regimes, G.5); Hong Kong and Macau regime with mainland China (G.1); pets into Singapore, Japan, Australia or New Zealand (G.4)
Red	Domestic leg on a foreign-registered aircraft (cabotage is closely enforced in Thailand); North Korea; payer or operator in a G.7 country (for example Myanmar, Kazakhstan); lead time impossible to meet

Source sections: Modules 2.5, 2.6, 2.9; Appendix G.1, G.4, G.5, G.7.

J.4 Americas: United States, Canada and Latin America

Colour	Triggers
Green	International flight on a US or foreign operator holding the needed authority; whole aircraft; clean screening; US broker disclosures made (14 CFR Part 295)
Amber	Foreign operator to or from the US (needs US authority); US federal excise tax when acting as principal (G.6); Canada and Latin America domestic legs reserved for local carriers; FAA security notices (for example Haiti, Central America, Colombia, Ecuador, Mexico, Panama)
Red	Any US domestic leg (both airports in the US, including Alaska, Hawaii and territories): never on a non-US operator, and on any operator only after US counsel confirms Archē's position; Cuba with a US-made aircraft; Venezuela (Paynode cannot pay)

Source sections: Modules 2.4, 2.5, 2.9; Appendix G.1, G.3, G.6, G.7.
